## DE SENSATION OF THE YEAR'

**AFTERBURNER** - You've played the arcade smash - now experience the white-knuckled realism of a supersonic dogfight at home! Using your heat-seeking missiles and laser anti-aircraft fire, can you be top gun against a seething supersonic swarm?

Experience brain-numbing G-forces, bones rattling with the body-jarrog pinch and yew scan with your radar, lock on your target and FIRE!

Amstrad cassette (£9.99) and disk (£14.99), Atari ST (£24.99), and MSX (£9.99).

# SPECIALS

## 16 DEMOMANIA

And two free games! Something of a coup, this month, as *CU* brings you exclusive demos of *Silverstreak* and *Demolite the Amiga* and *64* respectively. Plus two very special full-length games, *Silverstreak* and *Hyperactive*.

## 82 BABY'S BACK IN ACTION

Safe from the killer rabbits, Baby Einstein's back. More from Deadline's Philip Bond.

## 84 PLAYED IN JAPAN 2

It's seconds out for this popular feature. Why are the sales of consoles rising faster than the Hyper test?

## 90 PIXELLATED POP

A meeting we will go! Who's been making a masterpiece of saved "s" videos, after sampling coin-op FX in hand? Find out and see...

# B U Z Z

## WILLOW WHISKED AWAY

**T**he first release from the new European division of the American company, Mindscape will be *Willow*, which they signed before US Gold snapped up all the future licenses to Lucasfilms.

Like most of George's films, it's heavy on dwarves for some reason. In this case it's the Nalwyn — a race of little people who live in a neutral area of peace, but are surrounded by a land at war. Willow, a member of this diminutive tribe, gets stuck, much to his chagrin, with the task of taking a very special baby to the good castle Tir Asleen to protect her from the evil sorceress Bavmorde. Lots of stupid names and fairly groovy special effects. Presumably the game will take the same course.

Mindscape will be following up with a whole bunch of sports sims, including horse

racing and a club house sport compilation. "For the rugged indoorman."

## WHO SOLD ROGER RABBIT

**B**efore its official release in Britain by Activision, distributors Gainstar are importing and selling Buena Vista's *Who Framed Roger Rabbit?* game. The game costs a few pounds more through Gainstar because of the duty they have to pay on each copy, but as soon as Activision release it here (its

imminent), Gainstar will distribute their copies at their prices.

We'd like to point out that we are perfectly entitled to buy copies from our associated companies in the U.S. All our services will not be affected, distributors will be able to replace games, or refund money, in case of a fault. If there's any further problems,

get in touch with us.

Gainstar will be branching out into the license market themselves soon, having just signed a European distribution deal with the U.S. software company, Discovery — who were responsible for games like *Zoom*, *Hydra* and *Arkanoïd*. Forthcoming releases will include *Sword Of Sodor* and *Snskept*.

## ORBITER

**N**ow this is what I call a flight simulator! Spectrum Holobyte, through Mirrosoft, are about to unleash the

Commodore 5 first space shuttle simulator. At the controls of the Orbiter (wot no Challenger?) you will be able to blast at enormous speed up through the Earth's atmosphere into space where you can repair damaged satellites, build a space station and dump John Denver in geostationary orbit forever because in space no one can hear you sing.

Scheduled for March, this is going to be just the first of a series of simulations which will be based on the latest developments in American technology.

## DRAGON'S LAIR

**T**his one is strictly for the owners of a 1 Meg Amiga only we're afraid. Even considering that —

and the fact it comes on no less than six, yep, six discs — trying to convert *Dragon's Lair*, the arcade Laserdisc adventure, clearly was a pratty bleeding tough assignment. But here it is and very pretty it is too. The American company have managed to compress no less than 130 Megabytes of sound and graphics into this and the result is probably the best animated graphics game the Amiga will ever see.

Unless you happen to have a handy half dozen disc drives, the gameplay on this could be severely interrupted.

Nevertheless, if you're lucky enough to have the necessary expansion to your memory and a couple of ponies lying around doing nothing in particular, this is something which could make lesser mortals extremely envious.

## THE CHAMP

Fancy your chances a bit now Tyson's gone a bit wot on the stars? Well, you can be a

Champ can promise to strengthen your finger muscles, with some separate possible defensive and offensive moves. Like Line's new boxing sim. Like Iron Mike, you too can work your way up from brawling on the street corner to being W.B.C. champion of the world. If you're not quite that sharp, you can always try something a little bit below the belt like punching out the referee. Very handy for all you Korean style boxing competitors. And it "officially" features the music from "Rocky" too. Yaw-sah!

## POPULOUS

## OBLITERATOR

It's Sam in the morning when your intergalactic radio gang rings. Another call from the Federation Council Of Elders. Still you know being an Obliterator was going to be a 24 hour job. Apparently the entire Federation's air fleet has been destroyed by a ginormous alien spaceship. Ah well, looks like you'll have to get your genetically advanced body out of bed and save the Earth. Your mission in Mastertronic's conversion of the Payday's sheet 'em up is to enter this naughty alien ship and cripple it, thus allowing its destruction. Should be available on the 5-4 by the time this reaches you.

# THE AMAZING AMIGA...

COMMODORE

+ £5.00 post and packing

**MPS 1200P**

**£229.99**  
+ £5.00 post and packing

The Commodore MPS1200P printer presents the state of the art in dot matrix printers, with all the features of a printer that would cost much more. The MPS1200P is designed to be like three printers in one. It can act just like an Epson FX printer, or with the flip of a switch, it can act just like an IBM Graphics Printer with IBM Group II-1 character set (Diana/Norwegian character set support). It can also print all the characters available with the Amiga on the Amiga configuration. The MPS1200P is capable of all the printing functions you would expect, as well as some additional features you may not expect.

**MPS 1500C COLOUR PRINTER**

**£199.99**  
+ £5.00 post and packing

**6. TECHNICAL CHARACTERISTICS**

- PRINTING TECHNIQUE ..... Impact dot matrix (® needle/print head)
- DRAFT MODE ..... 60 lines, 9 vertical dots a (1 + 4) horizontal dots, - print speed, 120 chars, at 10 char in 2 chars
- TABULATION SPEED ..... 2 chars
- PRINTING DIRECTION ..... bi-directional, with optional head-on entry
- PRINT PITCHES ..... 10 char to 24 char (in programmable font loc, and in S.E.T.U.P mode)
- LINE FEED ..... 36m (4.23 mm) 1/3 (3.17 mm) and 1/2 (5.08 mm); - at 216 m and 9/72 m
- CHARACTER SET ..... ASCII characters and special characters
- MAX. PRINT LINE LENGTH ..... 40 top 192 characters, according to print pitch selected

**FREE  
DISKS**

# BUZZ

## US GOLD WALK IT

U.S. Gold are celebrating the acquisition of what could easily be the most desirable licence of the year. He's BIG, he's BAD... no it's not Bernard Manning, it's Michael Jackson. "Moonwalker", Jackson's fantasy film which has just been released, is all set to become a computer game. As a film, it's almost ideal for conversion. Michael's little

friends have to be rescued from the evil Mr Big.

Fortunately, with the passing of a shooting star, Michael has gained amazing powers of transformation, even greater than those of our own Gary Whitta's alter half a pint of lager shandy. Mr Big has met his match, Michael transforming himself into a magnificent silver robot with "supersonic" (sic) weaponry - no doubt with the aid of an

army of plastic surgeons.

In the final sequence he becomes a vast spaceship and surrounds himself with a powerful forcefield to reflect the rays of Mr Big's gigantic laser (Inar, Inar). Not bad for a sprout who started off in a pair of crushed velvet loafers.

"Moonwalker" the game should be available shortly and comes complete with an endorsement from the Llama lover himself.

## RAF FLIGHT SIMULATOR

Speak of all those decidedly American flying sims? Well, Cascade, in conjunction with the boys at Brize Norton, are in the process of producing a distinctly British flight simulator. You'll be able to take control of an R A F Tornado and fly it all the way to Hong Kong if you so choose. Their flight sim will be a close reproduction of the ones that are used to train R A F pilots.

In addition to this and as a

thank you for their technical advice, a proportion of the profits from each one sold will be handed over to the R A F Benevolent fund.

On the other hand, if you're not tired of American flying machines at all, Gaijin are now importing Discovery's new F-19 flight sim based around what can be gleaned about the top secret "Stealth Fighter" and shouldn't be confused with the Microprose game of that moniker. It's apparently closer to the Falcon F-16 game in its gameplay. Mind you, it's a fair bet the game takes its information from an artist's impression of the plane and not the grubby little photo released by the U S A F. Recently which shows the F-19 as a flying wing with all the aerodynamic grace of a Lada. Another problem for Discovery's sim is that the F-19 has just been given the new official name of the F-117A.

## LIVERPOOL DO DOUBLE

In your memory stretches all the way back to last month's Buzz, you'll remember we told you

Grandtam had signed the entire Liverpool squad. And because Buzz never tells pork pies, you'll know that this must be true. Well, of course, it is. That, however, hasn't stopped Video Images the company which brought you *Excelsior* on our November cassette licensing the actual club for its new budget game which will be out on the Impact label towards the end of the season. Seems like a lot of fuss over a club languishing behind the truly talented Millwall in the Football league stakes. By the way, did you know Millwall is the only team in the football league with creche?

## DRAGON MASTER

Another one Meg game! There's a hope for this one though, as it's due to be converted into standard Amiga format any time now. It also retails for £24.99 through Mirrorsoft. In the dungeon adventure genre you've got your intrepid hero's front view as he tries to get through one of these awkward days down the labyrinth. As well as the usual pummeling and pounding, you can expect some pretty mean puzzles.

## TYGER TYGER

Tyger, tyger burning bright hang on a minute, I don't remember anything in Blake's poem about me eating Aardvarks. Mind you, there wasn't much about a Sumo wrestler type geezer chopping his way through four harrowing levels with a sword. Firebird's 'all way' scrolling adventure is set in a "deceptively calm mystical land". Looks a bit like Morliffon to me. You'll be able to board the bus to Aardvark suburbia anytime now.

which will take shock, horror, brain power! This is set to take the dungeon adventure market by storm with its seriously decent graphics and thoughtful gameplay.

## ASTON MARTIN

In keeping with their new policy, Cascade have announced a second British license this month. This time it's for the car which will be leading Aston Martin's challenge for the 1989 Le Mans race. A 6 litre, four valve, V8 brute, pictured here, no doubt its creation was spurred on by Jaguar's success last year. The car itself has just been flown out to Florida to undergo rigorous testing and the Cascade programmers have been locked into a dingy basement until they've completed the sim, so it should be ready on schedule for early May - well in time for the big event.

## SHOOT 'EM UP CONSTRUCTION KIT

The Sensible boys SEUCK comes to the Amiga. Now you'll be able to tailor those glorious 16-bit graphics to exactly your own taste with the upgraded version of the G4 kit. With SEUCK's powerful editing tools you could write the next *N-Type*, or even get a therapeutic revenge on your enemies by turning them into sprites.

## DNA WARRIOR

Your mission, to pilot a micro-submersible through the blood stream to stop the erratic growth of a second brain." Though your way around the body of a top scientist who mistakenly thought two heads would be better than one. But, be warned, it'll take strategy to defeat the attacks of the mutant brain Gesso. *DNA Warrior* is 'The Fantastic Voyage' without Raquel Welch. A shoot 'em up in a different vein.

## PHOBIA

Welcome to the planet of the killer dentists! This really is a nasty one, forget those notorious necromancers, a man in a white coat holding a drill is Buzz's idea of MEAN. In *Phobia*, the evil Phobos has created fifteen planets each of which is the living incarnation of a human fear. Spiders, snakes, enclosed spaces, missing Neighbours. Naturally, you'll want to destroy these monstrosities and with a modicum of strategy you just might succeed in ImageWork's latest paced shoot 'em up. Out there soon on both the G4 and the Amiga.

# B U N N I

## SKATEBALL

"Skateball is the sport of the future, combining the skill of soccer with the gratuitous violence of 'Rollerball.'" Well it wouldn't be any fun without the gratuitous violence, would it? Turner has it that Ulloa's future shock factor also has taken its gameplay from a certain first division team. "Punting and harging against the opposition will earn the player bonus points." Could this be the first game to be endorsed by Virnie Jones?

## TERRARIUM

It's a pity that you no doubt know a computerised world where the only way to get to the top is to get to the top. It's a pity that you no doubt know a computerised world where the only way to get to the top is to get to the top.

It's a pity that you no doubt know a computerised world where the only way to get to the top is to get to the top. It's a pity that you no doubt know a computerised world where the only way to get to the top is to get to the top.

## SWORD OF SODAN

Some serious chop and slice action as your hero, or indeed heroine (you can choose), pounds their way through a variety of fantastic locales on the way to locate the necromancer who offed your old man. Screen high characters allow you a pleasing variety of moves, from a ferocious jumping chop to a sneaky stab well below the belt. The graphics are of the eye popping type and you even get to ride a mutant battle bird which looks like a cross between a Tyrannosaurus Rex and Orville. *Sword Of Sodor* is available through Galester in this country and looks likely to cut a swathe through some of the less lively action adventures around.

## PALLADIN

It's a pity that you no doubt know a computerised world where the only way to get to the top is to get to the top. It's a pity that you no doubt know a computerised world where the only way to get to the top is to get to the top.

# CU

We're smashing through the opposition. Why make do with magazines which offer you a one-sided deal on only one format when CU gives four great games for the 64 and the Amiga?

# DEMO

Just cut out this coupon (no photocopies, please) and send it together with £1.00 to CU Sidewinder Disk, EMAP Premium Service, 14 Haverhill Road, Orton Southgate, Peterborough, PE2 5LP. Overseas readers should add £1.00 for postage and packing. Deliveries should take 28 days but those who have problems should phone 8733 237111. Please don't phone CU!

## SILKWORM DEMO

*Silkworm* is a horizontal scrolling game in which two players must battle their way through level upon level of manroading fleets of missile launchers, tanks on parachutes, helicopters that follow your every move and squadrons of jets that zoom towards you at hair raising speeds.

The player can choose whether to fly a chopper or drive a jeep; both have equal amounts of fire power but each has its advantages so two players always make a great team. Extra firepower and bonuses can be earned but be careful or you might get blown to bits first. *CU's* demo can be played simultaneously by two people. One tip: dodge the flak as much as possible, don't shoot too much, and you'll see more of the level.

*Silkworm* is the first game to be coded by the new development team Random Access set up by The Sales Curve Ltd, licensed from Tecmo and programmed by newcomer to the Amiga, Ronald Pickett-Weesarik.

### Instructions:

**Side A —**  
**Silkworm** — Insert Disk to load demo.  
This is a one level demo. When loaded, the demo starts straight into the game with both players on screen (helicopter and jeep) with the helicopter controlled by the joystick and the jeep on the keyboard.

There are eleven levels with over forty different aliens in the completed game to date. The backgrounds consists of mountains, sunsets, sea, space, hills, cliffs and others.

The cursor keys for the helicopter are as follows: left (move left), right (move right), up (gun up), down (gun down), fire (left shift key) jump (ctrl).

## SIDEWINDER DEMO

'Miss this and you should be condemned to a life of play-by-mail games during a postal diapic.' Such was the verdict when *CU* put Mastertron's wunnerful shoot 'em up, *Sidewinder* to the test. We were right, it was voted best 16 bit budget release by the industry this year.

Hardly a blast from the past, this intergalactic blastaway features graphics 'which, at last, reach the standards that the Amiga has been promising for years'.

Oh. And one more recommendation from *CU's* tripped out reviewer: 'Turning the lights down and plugging the Amiga into a stereo while playing *Sidewinder* is an experience not to be missed'. Happy hunting!

**Sidewinder** — Insert Kikartari disk if required. At request for Workbench disk, insert program disk to load.

When you boot the game you will see the title screen. If no key is pressed the game will go into demo. Any key press will start play.

Select the difficulty level by pressing the appropriate key, or using the joystick to move the cursor and raising fire to select. These are: 1) Beginner, 2) Novice, 3) Pilot, 4) Ace, 5) Master.

Control is via joystick in part two. Press ESC to pause or unpause. Collect four power packs en route. These are marked as: R (Rapid Fire, hold down fire button) P (Power Shots, single-shot destruction) G (Ghost turns your ship semitransparent and invulnerable to enemy shots), H (Hoverer allows you to pause and shoot).

There are five different types of alien interceptors to kill, plus spinners, which are large passive air defence craft.

Various ground craft are your targets. Crawlers appear from level two — one hit disables these and a second blows them up. Walkers take three hits; hover craft appear from low four. Firs sit buildings and — when they are open — gun emplacements and mounds.

Please send me the Sidewinder disk for the Amiga.

CU FREE CASSETTE

**DOMINATOR (DEMO)**

**HYPERACTIVE**

**DOMINATOR (DEMO)**

**Side A —**

**Dominator** — Press **SHIFT RUN/STOP** and press **PLAY** on the cassette to load the game. Four highlights will display — then enter the living asteroid on collision course with Earth.

The demo you have is a part of load three. Sound FX will be on finished version.

**HYPERACTIVE**

**Side B**

**Hyperactive** — Press **SHIFT RUN/STOP** and press **PLAY** on the cassette to load the game.

Choose from four waves, three weapon types, four energy bars and 999 levels. Each weapon is suited to a certain level and each level is more taxing than the last.

With the survival wave collect eight pills and deposit each one at the level. Destroy all enemies without losing your energy. If you enter the dragon wave shoot the monsters repeatedly in their heads and collect spinning bonuses in the bonus level while bombing the bushes. Enter the attack wave and clear the screen — by killing off everything!

# LITTON

Who said that CU would ever fob you off with any common or garden sheep's Innards of a giveaway — (tripe to y'all)? 'Cos this month's free cassette features an exclusive, sneak preview of System 3's *Dominator*, described as 'the state-of-the-art 64 shoot 'em up.'

The game springs from the talents of programmer, Jason Perkins, who you may remember for his work at Gremlin on the ST. *Thing on a Spring*, *Thing Bounces Back* and *Jack the Nipper* are amongst his notable successes.

## DOMINATOR DEMO

*Dominator* — which will appear in C64 and Amiga versions — features horizontal and vertical scrolling. Release date for the 64 will be 16th March £9.99, price £9.99.

## HYPERACTIVE

Side two's *Hyperactive* comes courtesy of that whirlingly busy software house, Special FX.

The Liverpool-based team currently have their heads together, working on the conversion of Schwarzenegger's *Red Heat* across all five formats for Ocean. *Hyperactive* was written by Tony Pomfret, based on the Spectrum version by Jonathan Smith. It's visual FX are by Joffa, Jed and Karen.

And, at the time of going to press, a copy of *Batman* on the Amiga was winging its way from them southward to us. Watch out for the review in CU.

**COMMODORE USER**

# THE OCEAN

THE WORLD'S NO. 2 ARCADE GAME NOW THE COMPUTER SPECIFICATION OF THE YEAR.

When you shoot the bad guys, you get a new level of a marvelous arcade game. It's the only one that's been named "One for everyone's Christmas list" by the magazine. That only has all the action and gameplay been clipped) but so has the excitement. That's why it's one of the most satisfying and complete shoot 'em ups in total, it's never the same time.

Your Opponents in your battle for supremacy are the best types of evil Ninja star-throwing Assassins who strike like lightning and disappear.

Also due to spend your day are the best of the best: the vicious Guard Dogs. As you enter each level you must overcome the Ninja Master in order to progress - some examples of these superb and villainous are the breathing Fat Man, the Furious Claw Claw, and the Great and Gruesome Giant Ninja - who has a disconcerting habit of suddenly multiplying into an army!

## GAUNTLET 2

Screen  
Scene

US Gold

Price: £24.95

W

het do Cave-men, blobs of jelly and skeletons all have in common?

They all live in dungeons of course. I've no idea why — or who built all these dungeons, or even what for but they're always there anyway.

*Gauntlet* was the original arcade adventure dungeon and US Gold have here succeeded in maintaining its reputation as the original and the best. Everything you could ever want from a dark hole in the ground is here, and more. In fact, there is a massive 512 levels — so this is a very large hole in the ground indeed. *Gauntlet II* is light on superfluous scenery and heavy on action. Let's face it, you don't have to have all this explained to you, do you? FIND THE TREASURE AND STAY ALIVE. Which means collecting food and drink to keep you alive, amulets with stranger

*to slip sky blue who's it, not you!*

Classic gauntletearing

powers than Mystic Meg and potions to assist your magic power, amongst others.

You can choose from four distinct characters: Warrior, Valkyrie, Elf, and Wizard (in descending order of muscle and ascending order of magic). This comes in particularly handy, as you have the

option to play with up to four people if you interface with the printer port. A handy feature if you have that many joysticks and can fill that number of people round your monitor.

The monsters are reasonably various and the lesser ones often have to have generators destroyed to stop them regrouping to cause you more trouble next time you pass that location. The Elf monster is a nice touch. If you have the misfortune to come into contact with this glowing sphere (which you almost certainly will) all the nasties on that level will become attracted to you. The result being that they steam into you like a Wimbledon team which hasn't been fed for three weeks. You can transfer this affliction by touching one of your companions, making them 'it'. Needless to say, it does wonders for group loyalty as all other objectives go to the wall as you furiously chase each other around.

Graphically, *Gauntlet's* dungeon is excellent. Effortless omni-scrolling, well-defined sprites

SOUND 86%  
GRAPHICS 90%  
LASTABILITY 90%  
PLAYABILITY 96%

94%

and all manner of walle and floorplans to make each level distinct from all the others. The on-top view means you're limited to a view of the top of your character's bonce, but this pales into insignificance against the virtue of onsp definition, which *Gauntlet II* has to the highest level. The same goes for the sound — at last it's all there and sampled from the com-op, too.

Since the first *Gauntlet* has never been available on the Amiga this is the obvious choice if you want to buy one definitive arcade D+D game on 16-bit. For unabashed playability and downright fun, *Gauntlet II* is unbeatable.

Mark Heley

**H**ands up everyone who knows what LED stands for. That's right, Lazer Enhanced Destruction. So why is Capcom's new release so named? Is it because your stealthy space cruiser is armed to the hilt with lazer weapons of every description known in the galaxy? Nope. Is it perhaps because an alien armada is at this very minute headed toward the Earth, poised to wreak lazer-enhanced destruction on the cities of the world? Wrong again. Possibly your futuristic high powered car is fitted with lazer powered turbos to give you incredible acceleration? Bingo! Of course, obvious really, when you think about it, that the title has nothing whatever to do with the game.

**LED Storm** is a vertically scrolling race game. The object is to complete each of the nine stages before running out of fuel, being smashed to pieces by the other competitors and numerous obstacles, or disappearing down a hole, never to be seen again. Each of the stages has its own little surprises though, basically, they consist of motorway-like stretches of road dotted about with ramps, holes, people, fuel dumps, juggernauts and so on. It's a bit like the M25 on a good day.

By hitting a ramp, you can soar above the mayhem going on down below and avoid the really big holes that seem to go on for miles. Fall in to one of these and your only hope is rescue by a huge transporter thing (but it is mighty slow progress). Another way of avoiding damage to your beautiful bodywork is to pick

# LED STORM

The saucer drops all some 'E' additives.

Looks like you just made it.

up invincibility tablets which occasionally float across the road. These tabs, consumed by driving over them, provide your motor with a yellow force-field, enabling you to smash into anything with complete impunity. You have to watch out though, as they have a tendency to give out just when

you're lined up for a fifteen vehicle pile-up.

If this does happen, oil is not lost. You can replace energy lost in such 'accidents' by picking up the 'E' tablets that occasionally float past. The only problem with these tablets is that they have an annoying tendency to float

right off the side of the carriageway — and in your over-zealous efforts to capture them, you can end up doing more damage than you set out to prevent.

Landscape changes for the nine stages are more than just cosmetic, with plenty of new features introduced such as the coral monsters in stage three and the dinosaur remains in stage 5. All the same, this is little more than the old vertical scrolling buggy race with some nice scenery. Oh, and some great music to liven things up a bit.

**Ken McMahon**

AMIGA	
There's even less to recommend the Amiga version. The horizontal scrolling is jerky whilst the extra graphic capabilities are scarcely used. This highlights the game's inadequacies still further. <b>LED Storm</b> is a weak coin-op and the home conversions ultimately reflect this.

# F16

Destroy the enemy bridge.

Cockpit goes de well.

# FALCON

Microsoft  
Price: \$29.99

**T**he F-16 is proving a pretty popular jet for simulators these days.

That's not surprising because the F-16 is probably the best dogfighter around. It's fast, highly manoeuvrable, highly equipped, and well armed. It's also flown by some of the best pilots in the world. Which is where you come in.

After EA's groundbreaking *Interceptor*, Spectrum Holobyte have come up with the state-of-the-art fighter sim for the Amiga

It comes on two disks with a manual that reads in places like an advanced maths textbook. It took me an hour just to read it and get my head round some of the things involved. An even cursory read is advisory, but if you load up and get stuck straight in, you'll start as a 1st Lieutenant — about the same kind of level as *Interceptor*. You can't crash the thing — even into mountains — and the enemy is slipped a couple of Volium to keep them docile. Migs are soft, as Andrex and SAM missile bases don't launch at you should you stray

in range.

Once you've selected your rank and mission, the start up screen presents the picture of a fat and jolly ground sergeant

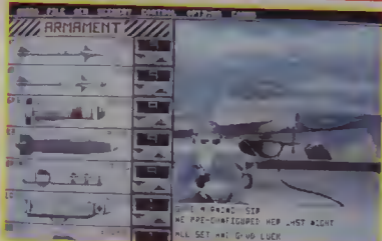

*Red alert, Migs swarm*

# AMIGA

## Screen Scene

User-friendly arsenal.

The Mig is on top, but not for long

who'll arm your plane for you. But load up too heavy and you will plummet out of the sky. There are a dozen missions to undertake and these range

from the *Milk Run*, in which you go in for a bit of target practice, to *Grand Slam* in which you're required to take out four Migs.

There are many different views of your jet, but the one you should concentrate on is in the cockpit. Familiarise yourself with the HUD display and the mass of dials in front of you. Again at starter level you won't need to worry about so much, but later on everything requires your attention. You'll also have to worry about adjusting your flaps and yaw/pitch. Try watching that

lot when you're in a dogfight and trying to toggle radar modes and set up a Sidewinder.

Like *Interceptor* you can look at the plane from outside and by pressing 2 you'll be able to pan right round the plane. Possibly my favourite

pastime when I'm not splashing Migs. There's a view from the control tower and a satellite view as well. Toggling F1/F2 allows you to zoom in and out. You're also allowed to look out both sides and even out the back.

Your various missions, failures and successes are all recorded in the Sierra Hotel role of honour. It's always preceded by little snapshots of the results of your efforts. Get blown away and you'll see a still of a cross and a flypast, a cock-up normally results in a court martial (you'll be logged as busted), whilst an ejection shows as being successful or otherwise and may or may not suggest rescue. One small gripe is that if you eject you don't get to see your pilot fly out the cockpit. There's no pleasing some people.

The graphics in *Falcon* are fine, the opposing Migs are particularly well detailed, and there's a good deal to see on the ground. Sound is OK, and an improvement on most flight sims by the inclusion of a 'Bitchin' Betty', an audible warning that rages at you if you're in trouble. Well authentic.

*Falcon* is packed with depth and since this is a review and not a manual I simple don't have room to tell you just how good it is. No doubt it'll be superseded by another sim soon, that's the beauty of the software scene. Until then it's Sierra Hotel.

Are you sure this is the  
Blackwell Tunnel?

LOMBARD

**T**he Lombard RAC Rally is probably the biggest, and most famous motor rally held by Lombard with the letter RAC held in the title. As you can probably tell from the intro, I don't know a whole lot about rallies, other than they involve you driving a car, plastered with stickers, around a very muddy course, skidding left, right and centre and continually coming within an inch of killing reckless spectators or overturning.

The particular rally that this game is based on is a five leg heat from Harrogate to Harrogate, stopping off at Carlisle and Telford on the way. Before you are allowed entry to the rally itself, you have to prove your merit by racing all five legs separately, and this is the important bit, you have to win a prize in at least one. To win a prize, you have to complete the course in any of three time ranges, earning you first, second and third prizes.

As well as racing, there are lots of other exciting aspects of a rally that have to be taken into consideration. Firstly, and

# RAC RALLY

We should have joined the AA

probably most importantly, you have to keep your car in shape. This is done at the workshop. You are shown the four main aspects of your car (engine, tyres, suspension and bodywork) and a percentage to represent the amount of damage for that area. Repairing it is no problem, but the cost is. Each percent costs one pound to fix. On top of that, there are numerous extras that need to be bought, such as fog lights, four-wheel drive (to help you get up hills), optional saucy lady (in case you get bored) and fluffy dice. The only real problem here is

getting money

There are two ways to get money. The first, though by no means the easiest, is by winning a race. The second is by protecting your public image and going for a TV interview. To qualify for an interview a quick-fire trivia quiz based on information in the back of the accompanying manual and more besides.

So once you've done all that you do the actual race. The game is viewed from a slightly unusual angle, from the back seat, looking between the driver and the co-driver. In effect, you're driving a remote con-

trol, and the driver is fully animated. See him turn the wheel, and change up and down the gears.

Control is fairly standard. Left/right to steer, up/down to accelerate and decelerate and fire held down activates the gearbox, with up and down then changing gears up and down.

The road is smooth and the update of the stripes on the road and the roadside objects is convincing and jerk free. The other cars, when you find any, are presented very badly however. The come towards you in around three updates, which is more than just a little jerky. This doesn't spoil what is essentially a fun driving game.

# OPERATION WOLF

"Even the NHS was better than this."

**T**he Amiga version of *Operation Wolf* comes on two mayhem-packed discs, but still really does take an inordinate time to load. I would have thought it would have been possible to compress the game a little more, especially as you're forced to go through the entire laborious process each time you want to play. Nevertheless the end result is well worth the wait and is undoubtedly the best representation of *Op Wolf* outside the arcades. The slowness of the load is pretty much its only serious fault. You certainly won't have to wait until you see the whites of your anering enemies eyes before you blow them away against the delightful well-drawn background.

The flimsy scenano doss hold the game together surpr-

singly well. Having a clear purpose does concentrate the mind and makes you feel a little better about the vicious carnage, even if it is just a bunch of old sprites. One thing I've always liked about this game, no doubt because of my mercenary nature, is that instead of getting points you get paid — cold cash money — so you can watch your bank balance escalate pleasurably (even if the nearest cash point is several hundred miles away).

The Amiga version is, to say the least, erm... challenging. No-one round here can get much beyond the second screen, let alone rescue the hijacked jet. Each adversary has to take a solid hit before they go down, and often two or three, and the thrown daggers which come at you regularly are a nightmare to shoot out.

The music too is an excellent adaptation, unfortunately you'll spend a little more time than is desirable listening to it as you wait for the game to load one more time.

Since you're meant to be wielding a Uz, it might have helped to give you a little more ammunition. Miss one of the collectables and you can wave goodbye to your mercenary

Taka that Telecom!

spending any of his ill-gotten gains. For the majority of people, who are unlikely to be able to ascend to the later stages without a considerable amount of practice, it would have been nice if you'd been given the option of switching the stages around so you at least get to die on a different screen occasionally. Unfortunately, that doesn't seem to be considered mercenary-like behaviour, so you'll just have to soldier on, ho, ho, ho.

*Operation Wolf* is a classic of its kind and this conversion by no means disgraces the

original. Don't let me give you the impression that, because this game is difficult, that it's impossible, or merely frustrating. *Op Wolf* is both addictive and compelling. Shame about all the disk swapping but, Ocean say, that was the only way you could have the whole game.

Mark Heley

SOUND 89%

LASTABILITY 86%  
PLAYABILITY 75%

84%

Ocean  
Price: £24.95

**R**Type is probably one of the greatest, if not THE greatest shoot 'em-ups to herald the arcades.

Unfortunately it's also a fairly average 64 SEU, a weak conversion which contains one of the steepest loading systems ever devised.

All you need to know is that you are the pilot of a class R-9 type airborne fight locked in mortal combat with the evil forces of the oppressive dictator, Bydo. The practical upshot of all this is that you get to fly, left to right, across the eight progressive levels of knuckle-hard, finger-prodding action. It's not the hoards of aliens that make it hard. It's not the high number of bullets in the air at once that causes the difficulty. It's the damn unplayability.

Your ship, which by the way is small and blocky, moves very slowly across the screen, and everything else has a tendency to move faster.

Graphically, the coin-op is all there. Activision have successfully managed to capture the look of the graphics, from the cold, metallic backdrops of the first level, to the murkiness of level two. There are one or

*In the worm's lair.*

*Surrounded by aliens*

two small discrepancies, however. One of the best things in level one was an incomplete hoop, that span round firing inwards. You had to get through the opening, wait until the opening has moved round in front of you, and then get out again. This has been converted to a series of guns arranged in a circle. The don't move or anything, they just fire, presenting no challenge at all.

The most important thing

about R Type is the fact that it's a progressive SEU. As you fly along, you come across a particular breed of aliens re-known for having strange digestive systems, which means, when they pass anything, it comes out as peculiar lumps of metal that, when attached to your ship, give you things like extra weapons. The first one you get is a natty number by the name of The Force. This is a little ball that attaches to the front or rear of

your ship and acts like an indestructible shield. It can also be fired off, to be used to clear particular dense areas. Amongst an impressive armoury, you have a beam weapon at your disposal. Hold down the fire button and release it to let loose a powerful energy bolt that flies through everything. Just how much damage it's capable of doing depends on how long you hold down the fire button.

As I've said, it has a particular bad loading system. If you are a cassette based user with no patience, think very carefully about buying this game. Not only does it suffer all the usual indignities of multi-load, it also has a nasty habit of loading in the first level at the start of each game, regardless of how far you got in your last game. Even if you didn't get off the first level last time, you still have to reload. It's also buggy — it's possible to let the first end of level alien fly right through you.

Not the most satisfying of conversions, especially when compared to something like *IC* or *Katakis*. It's addictive though, it'll keep you coming back for a while, particularly if you're a disk user, but the multi-load won't. Could have been much better, which is very annoying.

AMIGA

Screen Scene

**O**pening with the Kingsmen's Louie, Louie backing the credits, the

Amiga upsats of the 64 blockbuster is as Californian as a year round sun tan. It may not be the best of the hundred and fifty so versions of the song recorded, but it's the thought that counts

No new sports have been added to the original eight bit format, so the gameplay remains virtually untouched. You can skate in the hell-pipe, juggle with the foot bag, "shred the tube" (which is surfing, to all us pasty faced Brits), roller skate, BMX race and (whoopie) play flying disc — better known as Frisbee. You can take them on individually, or you can submit yourself the strains of a sun drenched soxthalon (that means six events, by the way)

Some of the events are as completely trivial as only the Americans could possibly manage. Frisbee involves you in launching the disc and then trying to position your catcher underneath it. A bit bleeding easy if I do say so myself . . .

Foot bag is, surprisingly, more fun. All sorts of combinations of tricks are possible. Wonderfully exotic stunts like the Horseshoe and the half axle, which basically consist of booting the bag up in the air a couple of times with different feet. If I really wanted to play foot bag I would stagger out in my spacious garden, not spend £25 on a simulation.

By far the best sports here are the BMX racing and the surfing. The BMX track effortlessly scrolls over a variety of different jumps and obstacles and each time you crash your rider lets out a painful little

Hollywood has its ups and downs.

What do points make?

# CALIFORNIA GAMES

squeal — especially the time he got impaled on a cactus — and a comforting message appears like, "Chill Out!" or "You Ate It!", which winds me up no end. Likewise on a surf wipeout, a little shark sometimes appears to the strains of the Jews' theme

The stunts you can perform here, if you're sufficiently adept, are moderately satisfying, but there's still not a lot to sustain interest. There's only so much your imagination can do with a dirt track.

As you'd expect the graphics on this Amiga ver-

sion are considerably improved, but all you seem to be paying for is a bit of improved resolution and a couple of extra stunts listed as Footbag. I managed an Axle Foley, but I can't tell you what it is because the instruction guide isn't kind enough.

Californian Games is a good laugh, it was ideally suited to the 64 but the Amiga can't make much more of it. To buy this sports sim you'd either have to be a relative of The Beach Boys, or just simply very rich.

Scene

Look what Santa's left in the 'in' tray.

# R ROCKET RANGER

**R**ocket Ranger just about typifies Cinemaware games on the 64, great fun, and an accurate conversion from their 16-bit predecessors.

At this moment in time 1940, Hitler and his Nazis are preparing to rampage across Europe and the known world, with the aid of super Lunarium bombs being built on the moon. You're called into the office of your CO and the you hear a strange high-pitched whine. In front of you appears a rocket pack and all the other sprockets to go with it, such as a helmet and Radium guns.

The first screen of the game is the map of the world, on which you have to place your huge spy network of five peo-

Two world wars and one World Cup, doodah, doodah...

ple in order to gain intelligence on Nazi bases or to organize a resistance movement. After a short time, one or more of the spy icons will flash, meaning they have a report for you. It's usually info on a rocket or Lunarium (the substance which is used by you and the Nazis to power rockets and build bombs).

Use the code wheel to calculate the distance between A and B, load up with the right amount of Lunarium (and do remember to take enough for the return trip) and take off. Then comes the nice

scene of a silhouetted Ranger over a backdrop of the world. If you're unlucky you get to fight some ME 109s (German fighters). This requires a lot of weaving and bobbing because as soon as you come across a plane it mimes you with a volley of twenty millimetre shells.

After that you are automatically landed at the base. If it's a rocket base, you get into a punch up with a German soldier.

As you only have a limited supply of Lunarium, and you also need 200 units for the

rocket ship you're trying to build, you'll need to find a Nazi Lunarium base pretty pronto.

On top of this there are other various hideouts and interludes that need to be visited providing a varied, playable game.

The disk access is a bit fiddly and spread over four disk sides, but for such a good, complex piece of programming it's only to be expected.

The graphics certainly can't be moaned at, keeping a high standard all the way through the game. The music is pretty neat too with loads of dramatic scores pummeling through the different scenes.

Another Cinemaware turbo charged de-luxe model, which deserves all the credit it should get!

IN COMPUTER SOFTWARE

## Screen Scene

That M25 feeling.

scrolling downward at such a speed that they don't move at all. What this means is that a lot of the time you are left looking at a very still screen.

The way the lines at the side of the road are displayed doesn't help either. Instead of the car being in the middle of the screen and the lines moving accordingly, the lines hold their position and you move the sprite at the bottom of the screen. This does not best give the impression that you are in control. To simplify, it's like watching a scrolling demo of a road while moving a sprite around at the bottom of the screen. You never actually feel like you're driving, and that is one of the game's big faults.

The appearance is one of great blandness. Now and again, some trees might make an appearance, but they are few and far between. The only other things you see are the opposing drivers. They stay in the centre of the road, which makes them hard to steer around, and then — just as you think you're going to get past — one of them slides in front of you and slams on the brakes.

The sprite graphics are true to the original, but that's about as far as it goes. Past that, there's little or nothing in this game to make you sit up and say 'Oh, this is WEC Le Mans converted, isn't it? Out Run was bad. Come on guys, let's have a little bit of progression, instead of regression.'

Tony Dillon

SOUND 36%  
GRAPHICS 50%  
LASTABILITY 28%  
PLAYABILITY 32%

31%

What's the best way I can describe WEC Le Mans? There are so many things I could say. I could tell you that it's one of the worst racing games ever to hit the 64. I could also tell you that it's a worse conversion than *Out Run*. Whatever else, it's one of the worst full price releases I've seen on the 64 in a while.

Opinion aside, *WEC Le Mans* is a 24-hour motor race around the famous Le Mans circuit. This takes you through night driving, early hours driving, the 'what bus am I on?' stage of consciousness and, of course, the 'oh good, it's finished' stage. The coin-op featured large, sharp, colourful graphics that beat even *Out Run*, plus sampled speech, a sit-down cabinet that rotated you through 360 degrees when you turned and stacks of

# WEC LE MANS

playability. The 64 contains a sprite at the bottom of the screen, a confusing road, some poor sound effects and lack of any form of realistic control.

The best way I can describe the control of the game is to describe the road. It follows

the same lines as all the other current race games, in it features some two-tone grey stripes which scroll down the screen and get wider at the bottom. As you 'accelerate', the stripes scroll faster. The funny thing is, when you reach top speed the stripes are

Conifers at Le Mans??

Ocean  
Price:  
£9.95 cass  
£14.95 disk

Lap of burning rubber.

# TURBO CUP

**I**t's time for another trip down memory lane. With the Amiga being a relatively new machine all the companies are cashing in by making new games using old ideas, the latest of which is *Turbo Cup*, a revamped version of *Pole Position*.

It's the usual set up. You are placed behind the wheel of a sports car (in this case a Porsche 944 Turbo) and the idea is to get round a chosen track as quickly as possible.

Lorciels  
Price: £19.95

Put that Porsche up front.

The first stage of the game is a practice lap, the faster you go the better your position on the starting grid at the beginning of the real race. The second stage is the race itself. The race starts and you find yourself jostling for position with the other cars until eventually the pack spreads out.

With *Pole Position* and the such like you only had two gears. On *Turbo Cup* you have five. What's more, it isn't just a case of climbing through to fifth and holding it. You have to select a gear depend-

ing on the road. Fifth is alright for the straights but changing down to third and fourth is necessary to get round a corner safely.

The graphics are consistently good but rather limited. The background graphics are the same for all the courses and after a while it gets a bit boring. The car is very good, attention has been paid to details like perspective and reflections from the rear windscreen. One small niggle is that all the other cars are the same as yours (except for

colour). It would have been nice to have some variation.

The scenery moves towards the screen a little jerkily but this doesn't detract from the game. Something that could have been improved is the sound. There is a half piece of music to accompany the title screen and the only sound effects are for engine noise, crashes and wheel spins.

The game is well put together. The gear system is fun to get used to and it's quite satisfying when you do. Unfortunately *Turbo Cup* suffers the same way as many other racing games do. It's fun to start off with but the repetitious gameplay means that it probably won't hold interest for very long.

I've got two big niggles (and jolly proud of them I am too!!!). First is that it's too easy to skid, this happens either after a crash or a bad corner. Secondly, you can find yourself trapped in a line of obstacles at the edge of the track. When you accelerate to move out you hit the obstacle in front and are reduced to a halt again. It can take quite a while to get out of this situation and it's very annoying.

*Turbo Cup* will probably be very popular with erdent fans of racing games but it didn't hold my interest for long. I'd advise looking at some other games in this genre before splashing out your hard earned cash.

## AMIGA PRO SAMPLER STUDIO + DATEL JAMMER

- A top quality sound sampling system at a realistic price
- 100% machine code software for real-time data files
- Hitless sample editing
- Real-time frequency display
- Real-time level meters
- Files saved in IFF format
- Adjustable manual/automatic record trigger level
- Variable sample rate & playback speed
- Separate screen for waveform, waveform play, even functions with Edit windows for fine accurate editing
- 3D A-bit of sound waveform. Wave editor to design your own waveforms at almost costing ones
- Microphone & line input 1 + 4 Jack & Din connector
- Software files can be used within other music utilities

To complement the Sample Studio the Datal Jammer gives you a 50 note keyboard to play & record your sampled sounds

### FEATURES:-

- 4 track sequencer up to 9000 events
- Tempo & Beat controls
- Music Controls on Instruments
- Load & Save sequence
- Works on standard IFF file sounds

## Screen Scene

Float like a butterfly...

**U**ntil now boxing sims have been pretty much a ring-side affair. You look on from outside the ropes while the two guys slug it out in the middle. TKO adds a touch of realism by stoking you right in the middle of the action.

There are four unranked boxers in the gym from which you can choose your contender. The select player screen shows your opponent's mug shot and fighting style at the bottom of the screen. You can scroll through the four available boxers to select whoever stands the best chance. You can also fine tune the attributes to give your man that extra edge. This is done by means of a sort of mixing desk

with five sliders to determine stance, power hand, best punch, strength and weakness.

Maximising certain aspects tends to have a negative affect on others. For example if you do push the strength slider to maximum your man may pack a hell of a punch, but all that muscle will slow him down and he won't always connect. The weakness setting lets you determine your boxer's staying power. Ability to go the distance carries with it a tendency to get badly cut up.

Using the joystick you can set your guard to one of five positions. Your guard position determines the kind of punch you throw when you press the fire button — a jab, a hook, or an uppercut. The punch can

be aimed by pulling the joystick just before you hit fire. So you can hit your opponent on either side of the body, either jaw or eye, in the nose, mouth or solar plexus. Everywhere in fact apart from below the belt.

The scoreboard appears at the end of each round and gives a complete statistical breakdown of your performance. This shows the total number of punches thrown, the number of head and body punches landed, the number of head and body hits your man took, the number of punches you blocked, the total damage you inflicted on your opponent and the score. Pretty comprehensive huh? The scoring uses something called the ten-point Must system in which the winner gets ten points and loser nine, unless he gets knocked down in which case it's eight!

At the end of a bout everybody's statistics are updated and saved to disc. There is also a two player game option so you can have a good scrap with a mate without any of the computer opponents being involved.

TKO is without doubt the most realistic boxing game ever. It's so much more satisfying being right at the centre of the action, throwing the punches and watching them land. The game lacks the big fight atmosphere though, not enough use has been made of sound effects (there's not even a decent bell at the end of a round) and there's no crowd.

**N**ow, correct me if I'm wrong, but an Amiga is as far a step up the ladder to a Spectrum as a full sit down *Galaxy Force II* cabinet is to a *Space Wars* console. If this is the case, then why has Novagen added a most Spectrumlike opening to their fairly mediocre shoot-'em-up, complete with a little sound effect that made everybody in this office look at their digital watches with alarm?

The game is nothing but the most basic of vertical scrolling blasters. The idea on each level is to blow up as many ground targets as possible without (a) running out of fuel (b) getting shot down or (c) crashing into anything.

Control is very similar to that used in *Undim*. Pushing the joystick in the direction you're travelling (either up or down) results in you accelerating in that direction. Pushing the joystick in the opposite direction results in you decelerating and just when you think you can go no slower, you flip over and start flying in the opposite direction. The problem here is, even if you are flying at the slowest possible speed, it still takes an age to flip and so you invariably hit the obstacle you were trying to flip away from.

The other thing that ruins the game is the rate at which you lose fuel. It drops at an alarming rate when you're moving slowly, but when you pick up speed, it's impossible to get anywhere.

Graphics are relatively well defined but it's all a bit samey. The scrolling is fairly smooth, but that's no saving grace when the game is no good.

Sound is poor, very poor indeed. It opens, as I said, with a Spectrumlike series of

# HELL BENT

Check out fuel levels

This game ain't a blast... just a basic shoot 'em up?

ascending beeps. All the usual explosive sound effects that used to be good are there, but come on, they're a bit old hat now. The title tune is awful.

Generally a terrible game

Boring graphics, sad sound and an almost complete lack of any playability or addictiveness. This kind of game does Novagen no good at all.

**T**he Abraham Lincoln had been sent on a mission to find the mysterious sea monster and you, Professor Annorax, were on board. Many days passed without sight of anything, until one day a great force destroyed the ship. Now you find yourself on board the Nautilus under the command of Captain Nemo. You decide to keep a record of your journey so that you may tell the world of new discoveries.

At the start of this dramatisation of Jules Verne's classic you find yourself in the living room. This is your centre of operations and much information can be found out here. This is also where you

*A panoramic view of the island.*

# 20,000 LEAGUES UNDER THE SEA

keep the map on which you must try to plot your course from the vague hints that Nemo might give. You can examine the manometer to get an indication of your depth and a speedometer is also available. In the centre of the wall is a large porthole. Opening this reveals an underwater scene that sometimes can give clues. From the living room you can move to the

*In the control room of the Nautilus.*

**Coktel Vision**  
**Price: £24.95**

AMIGA

Screen Scene

control room or the library.

The control room contains another porthole and the periscope for your use and sometimes you even get to control the Nautilus. The library is where (surprise, surprise) books are kept for your reference. You'll also be able to dabble on Nemo's organ.

Occasionally you may take trips outside (underwater or onto dry land) where clues may be found.

From the word go, the atmosphere created is sinister and mysterious which complements the game nicely. Everything is interwoven to create the desired affect and it works quite well. The game is well structured — just as you think that you're stuck you find something that opens up new areas to you. The graphics are excellent. Attention has been paid to detail in all displays. All the rooms are beautifully

drawn, especially the living room and the library. The deck of the Nautilus is also good, featuring some nice animation for the sea. Apart from this, animation is limited to times when you are away from the Nautilus (shark-hunting or island searching).

Sound is adequate but, apart from the organ it's quite limited.

I started to get into the game and was quite enjoying

A spot of fresh air up top

Go on, give the organ a bash

myself until the inevitable disaster struck and I opened a portndle whilst 100m underwater. So, it was back to the start and I had to go through it all again — a save feature would have been nice. It's quite difficult to get into due to the totally inadequate instructions that leave you resorting to guess work. There are often very long gaps between anything interesting to do and this seriously detracts from the

game.

The program was written by a French team and therefore has been translated into English. However, the translators missed the book titles in the library, they're all still in French! The titles aren't complex but it's still awkward if you can't periaz Français.

Overall a very good game that is spoiled by long waits and the lack of a save option.

**A**nybody who has played *Galaxy Force* in the arcades will instantly make a basic comparison between this and the arcade masterpiece, but that I am afraid to say is a basic resemblance. The main ship does look remarkably similar to that of the arcade game, but the backdrops and aliens are stunningly simple, the ground a matter of lines, and the enemy confusing and hard to hit.

The rough plot is that this mega galactic organisation has been assigned to protect the galaxy from any hostile intruders. Everything was going well until... a gang of hostile intruders took it upon themselves to invade. In retaliation to this attack the defence group scrambled their best plane and their best pilot too, in order to rid the galaxy

Fight hostile intruders.

# GALACTIC CONQUEROR

of this nasty alien menace.

On the nice big star map you can choose where you want to start fighting back against these ruffers, or you can choose a training mission. Quite what the strategic value of this is I don't know, if you're gonna go, you're gonna go.

Flying over the planet's surface you might be forgiven for thinking the place has been flattened by a nuclear explosion, the aliens rush on at you at an extremely slow speed, and there's a lot of them with it, making a very confusing

Bar a digitised snip of music on the intro sequence the rest of the sound is drab, and on many occasions irritating. The main ship graphic is nicely designed and could move very well, but is dampened by the movement of the horizon, which moves in direct relation with the movement of the ship, and looks decidedly odd.

As far as I'm concerned *Galactic Conqueror* is a complete waste of time, not representing anything other than a pretty useless disc. Another one for the heap.

# CUSTODIAN

**A**nyone who says that Hewson are trying to promote violence ought to get their wrists slapped. Who could say that a company which has made its name from making games that contain huge, colourful explosions and myriads of different weapons could be violent. Not I. (Shame strange logic here, Tone - Ed)

You are the custodian of some tomb or other, and your mission is to protect the tomb from some attacking alien pods. To do this, you first have to seek out the pods using your attack radar. Then you have to collect them and take them to the pod destruction chambers situated around the screens. Collect enough and you go onto the next, more maze-like area.

*Pretty, but don't scratch the surface.*

Each screen is quite large, at least a hundred screens in area, if not more. Dotted about are four things. The first are the armouries. It's here you can buy new and more powerful weapons. As with Cybernoid and Cybernoid 2, there are lots of different weapons, all of them limited. In Custodian, there are ten different forms of destruction to choose from, and the funny thing is, only two of them are of any use. The other eight, consisting of things like vertical firing bullets and four-way plasma bombs, just don't seem to affect the enemy at all. The smart bomb, and a handy little maze-like homing bomb are the best two. To buy them, you have to use up credits. At the

start of the game, you are blessed with 1000 points. As you kill the enemy, you earn more, allowing you to purchase more expensive items.

Second up are the teleports. These zap you to another teleport capsule somewhere else on the level. As with all types of transport, it costs money; in this case 100 credits. It's not all bad, though. It does give you some energy back.

The third thing you find are the pod destruction chambers. Collect a pod by running over it, and then fly into these black holes. You are then presented with four laser cannons, all converging on one spot, controlled by a cursor. You have to blow away the pod that

appears in the distance and rushes towards you. Let it get too near and it escapes, taking some of your energy with it.

The last, and probably the most annoying, thing you find, are the walls. These are here just to make life difficult. Some have holes in them for you to fly through, many don't. The higher the level, the more walls you're likely to encounter.

Graphics owe much in style to Cybernoid, although larger. The scrolling is smooth and fast—sometimes a bit too fast. All the usual explosions and things are there, of course, though because of the unplayability, you're not likely to see many.

The sound is all right, but nothing to tell your granny about over dinner. There is a tune, but it's more annoying than entertaining, and thankfully, you can turn it off.

The main problem with this game, and this is the one that I'm really going to chew over, is that it is too boring. Bouncing uncontrollably into things which are scrolling too fast for me to concentrate on— whilst trying to shoot aliens that are going to be off the screen before the bullet gets anywhere near them—is not my ideal of fun. Far from it.

A real let down from the masters of innovation. If this is the way that Hewson are now moving, then they soon won't be worth the laurels they're resting on.

# TV SPORTS FOOTBALL

**T**o most people the sport of American Football is nothing more than big men in big pads charging wildly into each other. But to people like me, avid supporters of the State's biggest game, there is a huge

attraction to the sport coupled with avid Channel 4 viewing and essential purchases of consumer durables.

For those who are not familiar with the game I'll give a brief rundown of rules and terms. The side in possession of the ball (the offense) have four attempts (downs) to move the ball ten yards forward from the line of scrimmage, otherwise the ball goes to the opposing team. If the offense manages to make it into the end zone of the opposing side with the ball he scores a touchdown worth six points. The player only has to get himself with the ball into the endzone to score, where as in rugby the ball has to be placed on the ground.

At the start of the down the

Mirrorsoft  
Price: £24.99

# AMIGA Screen Scene

Football hints: Mass in line to play the pro set

You have four attempts at a down for six.

Gee, don't ya love the anchor man?

My only complaint is that the arcade sequence is a little too slow.

You can choose from league or exhibition matches, or which team you want to use from the current NFL lineup; you can tweak the individual player's stats and names. And then it's onto the match itself. Start by tossing a coin to decide who kicks off, then the tactics screen comes up. If your team is in possession of the ball, you can choose one of four plays: "Shotgun", "I Formation", "Pro-Set" or "Kick". On the first three plays you also have to choose the formation you want the team to take. This is a tricky bit as ideas lend to surface way above the borders of realism and the wrong formation is usually selected.

The arcade section follows next. The flashing player is controlled by you, usually the quarterback on offensive play. If it's a passing play, as soon as the quarterback catches the ball, you can rotate his body through ninety degrees in order to get the best angle for a pass. Hit fire and he

launches the ball, then the player nearest the ball comes under control and has to be positioned in order to make the catch. And in best football tradition, if the catch is made you can almost guarantee three members of the defense hitting him almost straight away.

As an ardent Phoenix Cardinals fan I was over the moon with a real American football game on the Amiga. And I am very pleased with the results. It combines strategic action as well as arcade skills perfectly, and although each match is rather overdrawn (lasting about thirty minutes real time) it is enough to keep you playing. A most definite thumbs up to the best American football sim I have ever seen. Roll on the super bowl!

Mark Patterson

quarterback (or team captain) calls the play, if on the fourth down the offense has failed to make ten yards, they can take the risk of trying to make up the extra yardage or they can bring on one of the kickers to "punt" the ball upfield, or, if in range, try for a field goal by kicking the ball through the upright posts of the opposition's end. A success means three points.

Each match is divided up into four quarters, each lasting fifteen minutes. The clock can be stopped when a team calls a time out, this is usually done in the last minutes of play.

So, how does *TV Sports Football* match up to the real thing? Well it has all the strategy of the sport, its sound, and some of its action

Are you sure about this? Fortunately the games in this

## DAY

in a grating thud and there's a metallic dong if you bounce off one of the satellites. As there's no time limit, the race alternates between weave and dash, you have to balance keeping in front with not mis-

your're away Entertaining, but hardly original!

'Brain Bowler' is a bit more out of the ordinary. You have to reactivate one half of an 'exploded' brain through the electronic circuit board of 'intricate cerebral workings'. It looks more like the insides of a transistor radio to me. You do all this by bouncing a ball

You'll be transported into another dimension. You're then treated to some pleasant, pointillistic graphics to remind you that this is a parallel universe. Fortunately, there's no problem getting back to reality in time for tea and you can then choose a variety of different aliens to compete against — each of whom has different

*The ultimate in personal stereo*

excuse for an intergalactic sports sim aren't quite as obscure as their blurb. You start off in a slalom race around one of Saturn's rings. Go right of the red satellites and left of the yellow ones, but only if you're in the lead. Colliding with an asteroid results

zing out the markers.

'Ring-Pursuit' is as well presented a pursuit race as you could wish. Mervel as you thump into a lump of rock for the umpteenth time. Rage as your opponent kicks space dust in your face. Snooze as nothing else in particular happens.

The next game, 'Tronic Slider' is a fairly straight forward combination of a dodgem rink and hovering. When you shoot up a glowing energy ball, it breaks into pieces which you have to collect before the other bicker. Try and avoid bumping into the walls around the flat playing area and the 'shimmering monoliths' (translation: posts) and

*Ring-pursuiting.*

against the bits and pieces, re-routing charges to the brain centre. Your schizophrenic opponent on the other half will try to interfere as much as possible and the result is a very good game indeed. The game play allowing a variety of different tactics to be adopted.

I can't see 'Brain Bowler' becoming a national sport just yet. Where would you get a decent supply of exploded brains full of bits of cheap electronics? Then again, there's always Highbury.

The last game, 'Time Jump', is a little bit fatuous. Shoot up a few energy sprites and then pull back on a piece of cosmic elastic and bang!

characteristics which make him/hers/it better at some events than others.

The graphics are excellent throughout, sharp, well-defined and with a singularly deranged Gallic flavour all of their own. The sound effects are firm and complement the graphics well, but the only real drawback is the relative unoriginality of the gameplay. Hold the 'shimmering monoliths'. A sports sim, is a sports sim, is a sports sim.

Ever get the feeling you've seen something before? The legend of *Blacksilver* by Epyx bears a remarkable resemblance to something called *Legacy of the Ancients* released by Electronic Arts in October 1987.

The names and places have changed, only the gameplay, castles, towns, dungeons and temples remain. Now *Legacy of the Ancients* wasn't such a bad game so it follows that *Blacksilver* isn't so bad either. All the same, if you've already got *Ancients* and you buy this expecting something different you might be a bit cheesed off.

The plot goes something like this. Baron Taragas has found *Blacksilver* (the power to raise mountains and drain the very seas) in his mines, and people are getting wor-

Foul and Fetid Labyrinths.

# THE LEGEND OF BLACKSILVER

ned. Princess Aylea is more worried than most. Her dad, the King, raised an army, but got himself kidnapped before he could use it. Careless that.

Anyway, the Princess being bestowed of more mental material than her old man has worked out that someone who can raise mountains isn't going to be that impressed by the raising of an army. So, in an uncharacteristic fit of stupidity she asks this humble serf (i.e. you) to do the job. But don't worry, she doesn't send you off to do the job empty handed. She gives you a white feather (as she's trying to tell you something?).

I have to say something about all the stuff you get with the game 'cos it's really quite

Epyx  
Price: £14.99

Very good advice

good. As well as a thick booklet with all the story guff, instructions, hints, descriptions and so on you get a big map and a load of stickers with town names, temples, castles, dungeons and other landmarks that you can place on the map as and when you find them.

Travelling from town to town, city to city and so on can be accomplished on foot or in a boat if you can find one. It's a pretty treacherous business because every now and then you get attacked by wretched beasts like *Bran Spate*

that should be *Bran Spate*, screaming numbs, mid trills and so on.

When this happens you can stand and fight or run away. In the early stages when you are in short supply of hit points, food and gold, it pays to be cowardly. Run far enough and sooner or later you will run into a town. Towns are fun places, just like the real thing with people, shops, banks and casinos. Send your little man into one of the buildings and select speak from the menu and you will be greeted with an appropriate response like

'Fancy a game of blackjack?' or 'wanna buy some really vicious weapons with which to beat people around the head?', depending on whether you're in the barbers or the church. A short spell in the magic shop won't do you any harm.

So you go from town to town, from castle to dungeon

to labyrinth, fighting evil things, gambling, stealing, talking, spelling and generally adventuring. The Temples are worth a visit, you can brush up your combat skills by playing arcade games. You might also find yourself spending some time in the dungeons. Here the format changes from a birds-eye view of a stick man on a landscape to a 3D labyrinth. Dungeons vary from four to twelve layers deep and contain goodies for you to discover as well as some pretty wicked wildlife.

What else can I say? It's as good as it was last time I played it. To be honest I don't think changing the names and sticking a picture of David Essex's head on Arnold Schwarzenegger's body on the pack makes a new game of it. But if you didn't catch it last time.

## MEGA R-TYPE MAP, NEW NINTENDO REVEALED

Very un-Cousteau-like deep sea antics.

# MENACE

**M**enace first appeared last summer on the Amiga and was widely praised as the only game that could look like half a dozen other games without even trying. In those days it was called *Draconia*. Apart from the name, little else has been altered in

this carbon copy conversion.

*Draconia*, though no longer the title, is still the name of the planet on which this six level shoot 'em up takes place. There are six horizontally scrolling caverns, varying in interior decor from tropical rainforest to hi-tek metallic. Each has its own assortment of evil guardians, whose sole aim is a shield-depleting head-on collision with your craft.

For your part, your ship is armed with a puny cannon; but it can be re-inforced with any number of cannons, lasers, outdrives and force fields you care to pick up along the way. The bonus goodies are gained by shooting a complete wave of aliens (natives actually to be fair). When you blast the last, an icon appears out of the blue which you can use to

Xavious-like mirrors

**Psygnosis**

**Price:**

**£12.99 disk**

**£9.99 cass**

## Screen Scene

pick up the goods.

The only problem is: the icon is useless unless you first blast it with your cannon. With the first blast you get 1000 points; shoot it five times and you get cannons, ten times lasers, and so on... Each multiple of five shots turns the icon into something more useful. This makes it decidedly tricky to pick a middle-range icon bonus, such as the out-nder droids, and overall is a bit

of a pain. So much for theory.

So here's where the techs come in. There's no point in shooting at anything unless you're confident you can destroy the whole wave. You may get a few points, but you won't live long! And you've got to make sure you're well and truly stacked for the final showdown in which you get to shoot it out with an ugly-looking brute at the end of the tunnel.

I said this was a carbon copy of the Amiga version and it's about as close as you can get — right down to the (Amiga) screen shots on the pack. In reality, the 64 graphics are a treat, particularly the destruction sequence at the end of each level.

But my criticism with this — as with the Amiga — is that it's on the slow side and it lacks the kind of excitement that has you on the edge of your seat.

A familiar looking whirly snake

trying to snap the joystick in half. Large stretches of tunnel go by and nothing happens. Once you've given up on a wave, stragglers can be avoided with ease. None of the weapons are mega-blasting.

The net result is a bit on the gutless side, which is a shame 'cos the graphics are nice and the idea is simple enough to be a classic.

Ken McMahon

End of level guards.

8-fold choice of foes and friends.

hacking away at the nearest opponent until they die.

The graphics are great. They are large, clear and very atmospheric. But they do fall down, just a little, on animation. The game is a little on the slow side, but believe me, after a while you don't notice.

The sound is alright, but nothing brilliant. What we have is a direct conversion from the ST version, and I couldn't help feeling a little cheated. After all, the Amiga is capable of better things.

**HOTL** is, nevertheless, addictive. It's not the easiest thing in the world to get into, but give it a bit of time and wild horses couldn't drag you away from it. Not only have USG managed to capture all the feel of D&D they've also come up with a damn fine game.

Tony Dillon

# HEROES OF THE LANCE

**D**&D makes its first appearance on the Amiga in the unlikely shape and form of **HOTL**, unsurprisingly an arcade adventure with just a hint of role playing.

You are given control of eight of the most prominent characters from the 'Dragonlance Chronicles', ranging from a female cleric by the name of Goldmoon, to a feisty little dwarven warrior called Flint Fireforge. Goldmoon carries the Blue Crystal Staff, which, as if you didn't know, has lots of lovely healing qualities, enabling her to cure light and serious wounds, as well as the power to raise the dead (*useful* — Ed). The wizard, Raustin, has all kinds of offensive spells, such as Magic Missile, which fires magic bolts from his finger-tips, and an interesting little thing called web, which freezes anything it touches by binding it in huge amounts of sticky liquid.

The game is viewed side-on to the action, with doorways leading in and out of the plane of the play area. At the bottom of the screen are small digitised portraits of the eight characters, which show their respective health levels and which one is currently under control. Of the eight, the only one which can attack or be controlled is the one in the top left-hand corner. The top four characters are the ones which can be hit by traps and dragon breath. The bottom four are completely safe — and it's here you should keep all your weakest characters. Remember though, you can't cast any spells if the magic user or cleric isn't in the first four characters.

There are two types of combat. Ranged combat can occur when there are no enemies within a quarter of the screen. Should any enemy stroll into range of a character, hand-to-hand combat occurs. This basically consists of

Cleric with healing staff.

US \$60  
Price: £24.99

# POWERPLAY HOCKEY

**R**emember the Winter Olympics of 1980? No, neither do I! Well, it appears that the USA beat Russia in a thrillingly memorable final to win the gold medal. Now you have the chance to play in a similar match courtesy of Electronic Arts and it's only eight years late (and boy does it look it!).

The gameplay is atrocious. It starts with you and an opponent (computer or human) in the middle of the rink for the faceoff. You only ever control one player (the centre), the rest of your team try to put themselves into strategic positions.

Once you have the puck you have to skate down the rink dodging opponents. You can pass to other players (preferably on your own team) and get them to pass to you. If you get within striking distance of the opposition's goal then you can play a slapshot, and, if you're lucky it might get past the goal-keeper.

If the opposition get the puck you can try to tackle or foul them to regain control. The instructions go into detail about this foul and that tackle, but as far as I can see all you have to do is catch up with the player in control, press fire, and watch him go sliding across the ice.

**Electronic Arts**  
Price:  
**£9.95** cass  
**£14.95** disk

Play a slapshot.

You have a choice of one-a-side or five-a-side games. The five-a-side game is very confusing and prone to graphic hitches (I once found myself with no legs and a hockey stick floating above my head — very worrying).

The control system is abysmal, it takes ages for a player to respond to the joystick and when he does it's usually too late.

The graphics are no better

than the gameplay. The ice rink is nothing more than a few circles and lines (and badly drawn ones at that). The only nice thing I can say about the graphics is that the animation is reasonable.

The sound is bad. The graphics are too. There are limited sound effects and this

Get ready for some action.

occasionally annoying jingle. Often, you are scrolled off the screen.

I can't see *Powerplay Hockey* even appealing to ice hockey fans.

# CHEAPO

World Games

## WORLD GAMES Kixx

*World Games* is the pinnacle of the *Games* series. Travel all over the globe in search of international recognition as a world class sportsman in various fields. All the events are linked to the country they're set

in. Sumo wrestling in Japan for example, or Bull riding in the US. Graphics are large, clear and as always with *Games* product, perfectly animated. The multiloop does put a small dampner on it, but not enough to completely quench it. Good at full price, a gem on budget. (88%)

## GOLF MASTER Rack It

How does an overhead view golf game tickle your fancy? Not bad enough? How about if we take out all references to wind, any forms of manual dexterity and make it incredibly easy? 18 holes. A prize goes to the first person who can sit through more than four of them. Boring. (33%)

Golf Master

## STEEL Rack It

*Steel* is the new one from the same boys that brought you *Slayer*. It has you as a little hovering robot, not unlike Vincent from the *Black Hole*

You have to race around some space ship or other avoiding attackers and generally trying to stay alive. Silky smooth scrolling and great graphics make it more of a game rather than the tedious affair it might have been. (60%)

Steel

## PASTEMAN PAT Silverbird

One of disappointment went up when we realised that this

wasn't *Pastman Pat* with a mistyped label, but just the old 'slide the blocks around to make a picture' ladies puzzle type thing with a twist. You are Pat, the bill sticker, who, after just putting up an advert for the *Off and Lisa* game, realises that he's mixed up all the pieces of the poster. By scrolling the pieces of wall along, he has to try and put the picture back in some kind of order before the time runs out. He also has to avoid the bricks and pastebrushes thrown at him by passing jobs. Fail, and you fall to the floor, succeed and he performs a rather peculiar dance.

Nice idea, though it wears off fairly quickly. (67%)

# R O U N D - U

# Cheapo of The Month

Antirid

## ANTIRID Silverbird

Can there be a C64 owner who hasn't seen Palace's old classic? In one of the best arcade adventures of all time, you are cast as Tal, the barbarian warrior, in a desperate bid to destroy a huge nuclear power plant somewhere in an Amazonian jungle. The only way to get to

the reactor is by donning the Sacred Armour of Antirid, otherwise known as an anti-radiation suit. When fully stocked with jetboots and a laser, you become an awesome destruction machine.

Wonderful aliens, well defined sprites, smooth animation and stacks of playability will have you coming back for more. A real gem. Re-release of the month, no contest. (89%)

Gribbly

## GRIBBLY'S SPECIAL DAY OUT

### Rack It

Gribbly is a one-footed, no-armed strange creature from the planet Blagbor. Gribbly is

also a re-release and as I remember it, it wasn't too good to start with. Written by Andrew Braybrook, obviously before he went on to better things, your life as Gribbly primarily of fooling around the inside of a cave firing bubbles. The graphics are fairly smoothly animated, the game makes a big thing out of Gribbly's facial animashes, though the humour does tend to rely on his cuteness just a little too much. Gameplay is diverting briefly, but it's all over too soon.

An old game, and one that shows it. (42%)

Zamzara

## ZAMZARA

### Rack It

Trapped inside some strange alien world or other, you are Zamara. Looking like something out of Aliens and Tron, you guide the gorgeously animated creature through 256 scrolling levels of fast and very difficult arcade action. Your enemy come in two forms. The first and easiest are the air based creatures. These simply fly around and cause a loss of energy when you touch them. The second, and most dangerous are the ground-based monoliths and guns. Impassable until destroyed, these take a lot of hits while throwing a lot of flak at you.

Written by Jukka Tapanmaki, the author of Netherworld, and with some pretty fabba tunes by those Maniacs of Noise boys (responsible for the Savage sound effects, amongst other things), Zamzara would be good at full price. At budget, it's great. (82%)

## INFILTRATOR

### Kixx

The classic blend of flight simulator, arcade adventure and American humour. You are Johnny 'Jimbo' McGibbets attempting to foil the evil mad doctor's plans to rule the world. Find the base on the map, fly you helicopter to it, fighting and talking to enemy

and friendly craft as you zoom through neutral airspace. Get to the base, and the viewpoint changes to an overhead shot of the base. Move you little matchstick man about avoiding guards and generally keeping out of sight. Get into the buildings and cause as much damage as possible. It's multi-load, but it's fun. Gets boring very quickly, but great at the pace. (27%)

Infiltrator

# UP

# INTO THE

Keith Campbell gets international, tries to fathom why it's so difficult to break into buildings and how you transport a giant onion. There's a preview of Sierra's *Manhattan* and a cheap review, too.

Getting inside buildings is often a problem in adventures, and this month we have a castle, a fortress and a temple, to prove the point!

Two adventurers, both from down under, are currently stuck outside the castle in *Labyrinth*. Warren Simonsdon is from Queensland, and Stephen Miles is from Victoria; both can knock out the guards, but neither can open the gates.

The temple preventing worship is the one in *Rebel Planet*, outside which a troubled Jon Ramstad of Dale in Norway is to be found, scratching his head. Another temple, this time a game itself, is also stopping Jon's progress. The Fiend in *Temple Of Terror* just won't die, however Jon tries to kill him.

And so to a well defended fortress, through whose gates S.P. McLaren of Margate cannot pass without getting killed by archers. This appears in *Shard Of Inovar*. Perhaps Peter Noack's clues may help...

"*Shard Of Inovar* is a very difficult game," writes Peter, (who failed to include his address). "But the game can go on if you are stuck. I noticed that everyone had *Shard*, but no-one had *Inovar* itself." After much trial and error, Peter decided to share what he learned with Valley readers—so check out the clues section if you are stuck in this adventure! Thanks, Peter, and as I wasn't able to write back with the clues you needed for *Quest For The Golden Eggcup*, you'll find

that there, too.

Peter Enmurechts wrote from Mochelen in Belgium, about *Beyond Zork*: "In November's issue, someone wanted to know how to cross the rope bridge. I don't think there is a way to cross it, although you can get to the other side using the palimpsest that you find in the sea chest in the lighthouse. Maybe it has something to do with the Yard Improvement scroll, but I don't think so." There's a whole collection of BZ hints from Peter in this month's clues section, but he would still like to know how to transport the enormous onion he managed to edge off the cook.

It's painful playing adventure games at times, isn't it? Certainly Simon Orchard of Norton-sub-Hamdon, who is playing *Zzzz*, thinks so! "I can get to a road that I can't cross. I can see a bus that I can't get on. It's very frustrating.

It is, so any others in Simon's position should check out the *Zzzz* clues.

Ace Mellef, can't fix the elevator in *Star Wreck*, can't cross the river in Part 1 of *Snow Queen*, and wants the password to Part 2 of the same game! That's what I call hedging your bets!

If you're stuck somewhere nasty, or feel chivalrous enough to help someone who is in distress, or just feel like chatting about adventures and life in general, then write to me at The Valley, Commodore User, Priory Court, 30-32 Farrington Lane, London EC1R 3AU, and I'll get back to you.

## CAMPBELL'S COMMENT

A few months ago we looked at what the computer scene was like in Poland. This month, let's hear from Jon Ramstad, on *Adventures in Norway*...

\* There aren't too many software dealers in Norway, but some bookshops have a computer department, and it is not impossible to mail-order from various computer clubs and so on. In the shops there aren't too many adventures, but those there are very greatly from one computer format to another. Therefore, if I want to buy an adventure for the 64, it is probable that the shop has it only for the Amstrad, and I'll have to order it. But I read the Amstrad entry first! This gives me an idea of the plot, which I consider most important when buying adventures.

Jon Ramstad, Dale, Norway.  
Campbell's Comment: Yours seems a great country for adventurers, Jan, since there are more letters roll into the Valley from Norway than any other except the UK. I get quite a few from the Netherlands, too, and here's one of them...  
\* I want to thank you for your review of *Legend Of The Sword*. It's a great RPG!

*Adventure*. The only drawback is, it's so addictive that I lose a lot of sleep!

You asked our opinion about solutions of games in magazines, and I think solutions should be published. But code them, so you don't know the whole solution of an adventure at once.

"Bazorbach" Smeier, Dordrecht, Netherlands.  
Campbell's Comment: Solutions eh? Let's see what Matthew has to say...

\* Why not re-review older adventures, as new C64 owners won't have had a chance to buy the older adventures, and most mail order companies sell older adventures at cheap prices. Also, most of the older adventures are better than the new ones.

Why not have a section to review just budget adventures, because not everyone can afford to go out and buy a £10 adventure

# VALLEY

every week. (Have you seen *Quest For The Golden Eggcup*? It's ten times better than most of the games on the market at the moment.)

You could also do a complete solution to some of the more difficult adventures, and provide a list of names and telephone numbers of people that you can ring to gain help on an adventure that you are stuck on.

Matthew Holmes, Dewsbury, Yorkshire.  
**Campbell's Comment:** Eggcup was reviewed in the March issue — where were you that month, Matthew? I get the feeling when seeing lists of help-persons in other magazines, that the names on them hardly change from month to month — and as reading material they're about as interesting as a phone directory. Also, I have heard of volunteers being rung at all times of the day and night, and people that write for help, who never hear back.

Back in December I commented on hintsheets offered by a number of adventure software companies...

\* After-sales service is regrettably rare in the computer games business. After all, to take a cynical view, why spend money to help people who have already bought a game?

So perhaps it is not too surprising that Level 9 are still the only publishers that I know of giving away comprehensive free cluesheets for adventure games: six years after we pioneered the idea.

I've got quicker with practice, but it still costs several thousand pounds in time and printing costs, to produce a new cluesheet. Some people might think this is money wasted, but I prefer to think that extras such as free cluesheets are one reason why Level 9 are still around after all these years.

Pete Austin, Level 9.

**Campbell's Comment:** Hear, hear! And they certainly make my job on Valley Rescue a lot easier!

\* What I want to ask you is whether you could send me the addresses of those software houses that release home-grown adventures. I purchased the games you reviewed from Atlas Software and Martyn Westwood, and was very pleased with them. So I want more of that stuff, for its not too bad to get stuck on or dislike a C2 adventure, but a true misery if you've paid £30 for it.

I would be very grateful for the address of XL Software, and Cornsoft Software, and any other addresses where home-grown adventures are available for the 64.

Sten Sciatt, Antwerp  
**Campbell's Comment:** 'Fraid I don't have those addresses, Sten. Perhaps Cornsoft, XL, and any others in the field could write in, and I'll print a directory in a future Valley.

\* To be quite honest with you, I don't like those new type of adventures that use icons and things, although I own an Amiga 500. I refer to adventures like *Tass Times* and *Deja Vu*. No, give me adventures with lots of text and fantastic descriptions that tickle your fantasy.

I can stand a nice picture though. *Magnetic Scrolls* are brilliant with their latest adventures. I think they have found the right way to make an adventure: the right amount of text and a good picture in the right place. Peter Emmerrechts, Mechelen, Belgium.

**Campbell's Comment:** Yes, I agree that icon adventures do lack that subtlety and finesse found in good conventional adventures. But they can make a welcome change from keyboard bashing.

## SHADOWGATE:

The weight you are carrying breaks the bridge! Carry only light objects before attempting to cross

## RIGEL'S REVENGE:

Look under a seat to find documents.

## SHARD OF INOVAR:

At the start of the game, get Inovar and invoke the ritual of Deacirn. Go east twice, and invoke the ritual of release. When you enter the temple get ryxblade, go south twice, and give ryxblade to Laryx. Then go north twice, place the statuette of vulcat in the font, get the amulet of fire, go south three times, west, and mount Laryx.

## ZZZZ:

Thumb a lift with Saunman, and raise the sign from the ashes.

## QUEST FOR THE GOLDEN EGCCUP:

Show the card to the ferryman to return. To enter the hut, feed the bird.

## ADVENTURE CLUES

### VENOM:

Tell Harg to get the orb, and let HIM give it to the bearded wise guy

### SNOW QUEEN:

Don't forget to wash, and kiss gran before leaving.

### BEYOND ZORK:

To rescue the mixn rub out the footprints.

Refresh the lantern with the cellar scroll.

A second visit to the cellar should yield a bottle of magnificent Chateau Blanc 877.

Use the scroll of recall in one special place (eg the stablehouse) where you leave all your objects. By saying the word, you can be teleported there from difficult situations.

# INTO THE VALLEY

## PREVIEW • PREVIEW

### Sierra/ Activision Amiga —

New York has been invaded by aliens known as the Orbs. The city has been devastated, no maintenance or repair work is being carried out, and, meanwhile, the Orbs seem to be working furiously. Strange things are happening — the atmosphere has taken on a pungent odour, and the skyline is turning red . . .

You are assigned by the Orbs to be a Manhunter. Your task is to track down humans who have in some way wronged the Orbs. The uniform of your calling is a brown hooded cloak, and the tool of your trade is MAD — Manhunter Assignment Device — a portable computer linked by radio to the Orb's computer. This enables you to receive tracking records of the movements of people who have committed a crime, tracked by the Orbs for a period from just before to just after the crime was committed.

With a dramatic startup title sequence, *Manhunter* then 'plays' its own introduction to the story, an animated sequence of events showing an orb visiting your apartment with an assignment. Attention Manhunter! There was an explosion at Bellevue Hospital! Investigate! orders the orb, a sort of enlarged floating eyeball. You see yourself getting out of bed, dressing, walking across the room to turn on the light, and finally, checking out the MAD. Not until this sequence has played itself out, is any player input required, or even possible, other than a stab on the RETURN key. Not very friend-

## MANHUNTER NEW YORK

ly if all you want do so is load a saved game!

MAD offers you the choice of activating the tracker, showing the route taken by the hunted man, or enter in a name for more information. Alternatively, by pressing a function key, you can travel — although you are limited by the Orbs to visiting places relevant to the hunt. Therefore, you must use Tracker, to follow the man's route, to authorise you to visit the places he has been.

A map of New York now unfolds and traces the path taken by the criminal. When he stops, the Tracker zooms in, giving you a close up plan to the area, and his movements within it. After he has left, his stop-off is marked by a flashing light on the map. At any time during the sequence, the tracker can be interrupted, enabling you to follow the trial by selecting TRAVEL. The tracker can be restarted, and the trail con-

Wouldn't you like to hold his hand?

Handsome, eh readers?

Manhattan skyline, Orb-style

my first assignment? My quarry, it turned out, blew a hole in the wall of the hospital, and killed a man. He then proceeded to a church, had a close look at the candles and called in at a bar to play a video game before mysteriously fading away, apparently into thin air, in a ladies lavatory!

The system is very slick, but because there are so many graphics, many of them automatically sequenced to show action over which the player has no control, they are loaded in groups leading to frequent 'loush dak' delays. The pictures, whilst large and colourful, do not have the fine gradation of shade, colour, and detail that can be obtained on the machine used. I previewed the game on the ST, as only ST and PC versions were available in the UK at the time, but I imagine the same will hold true for the Amiga.

The Amiga version is expected during March. You should find it big, slick, and entertaining. But although big, *Manhunter* is not an adventure in which the player has the feeling of freedom of action much of the time. If used in future games, the system would seem to limit the scenario to a hunt and follow story of a similar type. Manhunter — London? Manhunter — Moscow? Well, Sierra can always be relied on for a sequel!

So what did I get up to on

# TOTAL ECLIPSE

Experience the ultimate in suspense and excitement with the new Total Eclipse board game. The game is set in a desert where a total eclipse is about to occur. You and your friends must work together to solve a series of puzzles and escape the desert before it is too late. The game is played on a board that is shaped like a desert landscape. The board is divided into several rooms, each with its own set of puzzles and challenges. The game is played in turns, with each player taking a turn to solve a puzzle and move their pieces. The first player to escape the desert is the winner. Total Eclipse is a challenging and exciting board game that is perfect for family and friends. It is available in paperback and hardcover formats. The paperback version is \$19.95 and the hardcover version is \$29.95. Total Eclipse is published by Avalon Hill. For more information, visit our website at [www.avalonhill.com](http://www.avalonhill.com).

# PLAY TO WIN

## AMIGA OPERATION WOLF

### Method

1. Reset your Amiga and load AMIGA BASIC.
2. Type in the program listed below.
3. Save the listing for future use.
4. Run the program.
5. When you are asked to, insert your Operation Wolf disk 1 in DFO; and then reset your computer. The game will now load and you will find that you have 20 magazines and 20 grenades.

## ELIMINATOR

Getting stuck early on in the game? Here's the full complement of access codes to get you right up to stage 14.

Stage	Code
2	AMEOBA
3	BLOOP
4	CHEEK
5	DOINOK
6	ENIGMA
7	FLITME
8	GEEGEE
9	HANDLE
10	ICICLE
11	JAMMIN
12	KIKONG
13	LAPDOG
14	MIKADO

As always we get all our tips from the top, and who better to ask than Mr. Eliminator himself, John Phillips. 'Keep moving' he says. The aliens will always fire at you. Also, use the second weapon. It's the most effective and it doesn't use up as much ammunition as the others.'

## ELITE

To enter the hacker screen, boot the game. When asked for the password enter SARA, then press return. Now enter the correct word from the training manual and get onto the status screen. Press the HELP key and you will now be in the hacker screen

When all the values have been entered press ESCAPE to return to the status screen, and you should be able to give the Thargoids a hard time.

BYTES	VALUES	EFFECT

ONLY £4.99

## DATA RECORDER

- Quality Commodore compatible disk recorder.
- Power control, number, etc.
- Suitable for 84/130
- Runs now for quick delivery

ONLY £24.99

## DEEP SCAN BURST NIBBLER™

- The most powerful disk nibbler available anywhere, at any price! Burst Nibbler is actually a two part system - a software package & a parallel task to connect the 1841/1870/1871 to 84/130 (state type).
- What gives Burst Nibbler its power? Conventional nibblers have to decode the data from the disk before it can transfer it using the serial line - when you standard data is encountered they are fast! Burst Nibbler transfers data as raw OCR code via the parallel cable without the need to decode it so you get a perfect copy of the original.
- Will nibble up to 41 tracks
- Copy a whole disk in under 2 minutes. Full instructions.

- Regular updates - we always ship the latest.
- Packed in a sturdy case with quality materials required to Full or 1/2 tracks
- No need to buy parallel cable if you have Disk Drives/Drum/Disk etc.
- Cable line throughlines extension for other use.
- Whether to choose FastTrack™ or Burst Nibbler™ Fast Track™ is unbeatable value as an "all rounder" with nibblers, 1 or 2 drive copy format file copy, 1871 copy etc etc., as if you have a more general requirement perhaps Fast Track™ is for you. Burst Nibbler is a more nibbler second to none for the nearest method. So if you just want backup you are interested in, there is no other product to beat it!

ONLY £24.99 COMPLETE SOFTWARE ONLY £12.99

## ROBOTEK 64

ROBOT CONTROL MADE EASY

- 8 output channels - each with motor relay
- 4 input channels - when fully buffered TTL level sensing
- Analog input with full 8 bit conversion
- Pulse input for voice control
- Software features - text menu/wordpad measurement/voice activate/digital readout etc.

ONLY £39.99

INCLUDING HARDWARE/SOFTWARE MIC, ETC.(STATE TAPE OR DISK)

## TOOLKIT IV

## THE ULTIMATE DISK TOOLKIT FOR THE 1540/1541.

- A disk toolkit is an absolute must for the serious disk hacker or Yasuhiko IV has what you need. Disk tool kit most for you.
- DISK DOCTOR™ Read & write any track & sector including extra & remumbered tracks. Repair damaged booters. Look undermask read errors.
- HEADERS/GAP EDITOR™ Decodes & displays ALL header information including all bytes & header gap. Converts the entire header & header gap. Remumbered sectors. Ask you any sector tall gap.
- DISK LOOK™ Read directory. Reverse last files. Display file start/end addresses. Dimension any file. Program directly from the disk to SCREEN or PRINTER including undocumented options. Best disk.
- FILE COMPACTOR™ Can compact unwanted programs by up to 80%. Save disk space. Computed programs run as normal.
- FAST DISK COPY™ Copy an entire disk in 2 minutes or less using single 1541.
- FAST FILE COPY™ Selective file copy. Works at up to 6 lines at normal speed.
- FORMATTER™ 2D sector format in entire disk or format any individual track in half track D to 41. Re-format any 30 parameters to create or recreate unique disk formats.
- ERROR DIRT™ Quickly find & correct all read errors including extra & remumbered tracks or sectors & half tracks from 0 to 41. Convert error data under errors & allow you to reduce any necessary parameters.

ONLY £9.99

# DATTEL ELECTRONICS

## NEW CLONEMASTER

- The most effective tape to tape back up head available.
- Makes perfect backups of your tapes easily & effortlessly!
- No more knowledge needed at all.
- On board TTL logic circuitry actually shapes the program & sends a perfect signal to the record cassette - producing a copy better than the original in many cases.
- On board LED indicator shows when data is being transferred to avoid cassette tape winding.
- Works with dot set any program including multi loaders, turbo & even 777 manual type turbos.
- Requires access to two COM compatible data recorders.
- Simply press 'Play' on one recorder & press 'Record' on the other - that's it!
- You can now make a backup while you are loading the program.
- This is a total hardware solution as programs to load the results are standing!

ONLY £9.99

## TURBO ROM II

TURBO ROM II IS A REPLACEMENT FOR THE ACTUAL KERNEL INSIDE YOUR 64. IT PROVIDES SUPERFAST LOAD/SAVE ROUTINES.

- Loads most programs at 5-6 times normal speed.
- Saves at 5-6 times normal speed as well!
- Improved DOS support including 10 sec format.
- Programmed function keys - load, directory, add etc.
- Returns to normal kernel at a flick of a switch.
- FCOPY 280 block file copier.
- FLOAD-special I/O loader.
- File lists menu.
- Filtered in selection an ordering usually required. (On some 64's the old ROM may have to be disabled).

ONLY £14.99

## BLUE CHIP DRIVE

- External power supply for easy operation.
- Even works in 1671 double sided mode (128 used).
- Fully C64/128 compatible.
- This drive is now probably the most compatible drive available for the Commodore 64 as this extra Commodore 64's.
- Supplied complete with all cables so move to lay.
- As last, a top quality drive at a sensible price.

ONLY £129.99  
ADD £8.00 FOR COURIER DELIVERY

## ULTRA CRUNCHER

- The ultimate cartridge based program copier.
- Compacts by up to 30%!
- 3 compacting programs on one cartridge.
- Fast loading/saving routines.
- Full DOS support including fast format.

ONLY £12.99<sup>per cartridge</sup>  
Available on chip only for 5064 Supermac Board for

ONLY £7.99

## FAST HACK'EM™

- Multi Module Disk Nibbler all on one disk.
- Single 1641 Nibbler Copy a disk in 3 minutes.
- Copies file File Copy - under 8 seconds typically.
- Fits unique Parameter mode 'Thru file' 'unlock' the menu.
- Newly protected programs with a parameter for a particular brand or even single program.
- No other product in such a good 'All Responder' at this price.

ONLY £9.99

## SMART CART

- 21K precode ROM.
- LittleMem battery lasts up to 3 years.
- Easily load the program you require - then flip the switch. The cartridge can then be removed just like a ROM cartridge.
- Make your own cartridges including subsector types - without EPROM burner. 25K versions - 4 x 2K pages.
- Noor knowledge of M/C is helpful - but full instructions included.
- I/O 5 slot open for special programming techniques.

ONLY £29.99

## RAM DISK

- Turns your Smart Cart into a 25K Ram/disk.
- 21K of instant storage even for files/programs.
- Disk type commands, load save directory search.
- Program data retained when computer is switched off.
- Full manual set with instructions.

ONLY £9.99

## ROBOTARM

- Explore the fascinating science of Robotics with this full feature RobotArm.
- Human like dexterity with 5 axis of movement. It is so versatile it can manipulate small objects with amazing ability.
- Comes with Accessories including Trigger Jet, Magnetic Atom Bomb, Steel Bomb & Stabilising Buckles Legs, etc.

## INTERFACE OFFER

- Unique Software/Hardware package to allow you to interface your computer with the Robotarm.
- Train made allows you to store & Use typical movement sequences.

## EPROMMER 64™

- A top quality, easy-to-use EPROM programmer for the 64/128.
- Fully menu driven software/hardware package makes programming/loading/verifying/copying EPROMs simplicity itself!
- Will program 2716, 2764, 27128 & 27256-chips, 15.5, 21 or 28 volts.
- File into one port for maximum compatibility with cartridges/supermac board etc.
- Full feature system - all functions covered like driver check/verify!

- We have EPROMMER 64 in the most comprehensive most handy & best value for money programmer available for the 64/128.
- Ideal companion for Supermac Board, Cartridge Development System, our hand set operates so indeed any EPROM base project.
- Comes complete with instructions plus the cartridge handbook.

ONLY £39.99  
COMPLETE

- Easily controlled using 2 joysticks (any 2 pin type) or connected to your computer with our Interface Software to give Computer/Robotics control (see Interface Offer).
- Uses 4 HPS batteries (not supplied) to power motor movement so uses an computer power.
- Self contained, ready to use (except batteries/joysticks).

ONLY £49.99

- Very easy to use.
- This interface kit is needed to use the Robotarm but interfacing with your computer has great possibilities.

# CU LETTERS

## Robocop Poster

● I'm writing about the December issue of CU. The poster of Robocop was exactly the same as the games poster, except for the arms and half of the right leg. I suggest: 1) that you rename Lee Sullivan 'Lee "Pirate" Sullivan'; 2) that you sack Lee Sullivan (it was he who drew the poster); 3) that you please print this letter (drool, slobber, drool). Please mention my name a lot in your reply. I can then brag to my friends. Michael Lathour, Worksop, Nottinghamshire

Lee did the artwork to our specifications. Our picture carries no resemblance to the still used on the back of the game's instructions or its cover. Get your eyes tested mate! Since you've made a bit of anelly of yourself we suggest you keep this letter a secret from your mates.

## Questions Questions

● Could you please tell me the answers to some very important (to me anyhow) questions? I was considering buying a disk drive, but is it worth it? Is the Commodore market still there? Or would it be better for me to upgrade to an Amiga? If I were to get a drive, though, which would be the best one — the 1541 or the 1581? What's the difference? (That's quite a lot of questions — Ed). I also want the July, October, November and December back issues, so could you please tell me the prices for these issues as the price seems to have changed a bit since I last got the September issue. Once I have this information do I have to send a postal order to the

back issues address? Finally, could you tell me why the price of the games advertised by your retailers appears to much cheaper than stated elsewhere? Can this method please be trusted? I've heard of some people having trouble with delivery. Does the same apply to software houses? Well, all that's left to say is — in the immortal words of Cilla Black — ta-ra, ta-ra! Paul Mawdsley, Fazakerley, Liverpool

Is the G4 market still there? Good question. A glance through this month's issue shows a preponderance of reviews for the Amiga. This is not deliberate, it simply reflects the amount of G4 and Amiga software available. The 1581 only works with the C128. You need a 1541C or a 1571 for the G4. Back issues can be obtained by sending the magazine cover price, plus to cover postage and packing. July and October's issue cost £1.10. November and December cost £1.20. The games advertised in Commodore User have nothing to do with us. They are mail order companies.

## Wot No Gift?

● Having just read the January 1988 issue of CU I was delighted to see the February issue for Amiga owners is to include a cover disk with Sidewinder and a demo of Silkworm. GREAT, FANTASTIC. I thought to myself until I read the small print!!!! Yes, people in NORTHERN IRELAND are unable to obtain this deal Why?? Because there are neither W.H. SMITHS OR MENZIES shops in our fine province. I would like to ask CU if there is an alternate way of getting this special issue?? Andrew Roddis, Lisburn, Co Antrim, N. Ireland. Disappointment cancelled. Look no further than pages 16 and 17, this issue, for details of who to contact if you cannot get hold of a cover mounted freebie. Your particular instance is

just one of a billion reasons why you should take out a subscription. Regular subscribers to CU get their magazines AND FREE GIFTS posted directly to them. The address, should you be interested, is listed amongst the credits on the contents page.

## Calling all Greboes

● Having seen that brilliant game, *Shmobi*, rocket into the charts and peak at fourth position, I thought I'd write in and offer my help on compiling a map and various hints n' tips. I completed the game months ago. The way I see it there are two solutions. I could try and draw the map; but since I'm not renowned for my drawing abilities I recommend the second solution. And if you haven't worked it out yet, I'd like to come down to London because I live in that charming place of Bradford, or in your case Planet Freakout (ref. Zodiac Mundwarp) and complete the game in the prestigious company of the CU crew. Also, could Mike Berry aka 'Kernal' Gadafi?? of Atherton, Greater

Manchester (Sept iss.) contact me as I'd like some help with my programming! Well that about wraps it up. I'd just like to say hello to Llanq and Riaz and any other greboes out there. PS Please print my full address, so that Mike Berry can contact me. Mohammed Karolla, 53 Southfield Square, Bradford 8, W. Yorkshire, BD 8 7SN. No sooner said than done, but it's a roundabout way you have of saking to see our office. Try the following instead: 'Here's a clean, crisp five' or 'Hon would you like a goodly pint of the landlord's fowwing best?' As for the sh dig at Bradford — how dare you sir! In our humble opinions, there is no finer place than the megapolis of the North. May the postie bring you greboes galore . . . .

Please send your letters to CU, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

© 1988 CU

# BABY EINSTEIN

AGAIN WE FIND OURSELVES IN THE BEDROOM OF COMPUTER WHIZKID AND MASTER OF THE HAWAIIAN SHIRT, CHIP JOYSTICK. LET'S SEE WHAT HE'S GOT TO SHOW US THIS TIME AROUND...

EVER PLAYED THIS ONE, KIDS? TALK ABOUT INTERACTIVE GAMES, THIS 'BABY EINSTEIN' TAKES THE BISCUIT. JUST WATCH THIS..!

HI, CHIP - WHY NOT COME INSIDE AND DECIDE WHAT TODAY'S GAME'S GONNA BE ALL ABOUT?

USER-FRIENDLY TOO!

**POW!** WELL, DOT, I WAS THINKING OF SOMETHING WITH BARBARIANS, SWORDS, MONSTERS, ALL THAT, YEH?

SOUNDS LIKE A LOAD OF ESCAPIST CLATRAP TO ME, BUT YOU'RE THE BOSS!

WOW! THIS IS WHERE IT'S AT! WHAT A GET-UP - ALL ANIMAL SKINS WITH A WHOPPING GREAT CLEAVER, HYUK HYUK. THANKS, DOT!

YOU LOOK LIKE STAN LAUREL AFTER RAIDING ARNOLD SCHWARTZENEGGER'S WARDROBE!

I'D NEVER HAVE GUESSED YOU'D HAVE A HAIRY CHEST!

LEAVE IT OUT! COULDN'T I HAVE MY SHIRT BACK?

C'MON! WHERE'S YOUR BARBARIC BLOOD? ALL WE NEED NOW IS A MONSTER TO FIGHT. ANY IDEAS?

OH, YEH! LET'S HAVE A HUGE METAL ROBO-DRAGON THING WITH ACID POISON CLAWS AND X-RAY HEAT DETECTOR EYES!

OK?

FINE. NOW, IF YOU'D QUIT OGGLING OVER MY DADDY RIMBOID OUTFIT, YOU MIGHT NOTICE WHAT'S CREEPING UP BEHIND YOU!

EH?

WHAT THE HELL IS THAT !?!

DON'T ASK ME, CHIP. YOU THOUGHT OF IT!

HI, KIDS!

CHIP! COME BACK! IT'S ONLY A GAME!

AAH! I KNOW I SAID ALL THOSE THINGS, BUT I NEVER THOUGHT IT WOULD BE THAT HUGE!!

GET OVER THERE AND DEFEND YOUR RAVISHING PRINCESSES IN DISTRESS!

THAT'S YOU, RIGHT?

SLASH!  
ARGH!

Poop!

ERK! WHAT HAPPENED? DON'T I GET THREE LIVES?

THIS ISN'T JUST AN ESCAPIST CHUCKLE, CHIP - YOU'RE MEANT TO LEARN FROM THIS!

OH.

MORAL: BE IT IN FRONT OF THE SCREEN, OR ON IT - EVERYTHING IS REAL LIFE, RELATIVELY SPEAKING.

END

# PLAYED IN JAPAN PART 2

Space Harrier on the X58000

The average Westerner's conception of the land of the Rising Sun is of a nation of hard-working, technology mad folk, and, although like all racial stereotypes this image should be taken with a pinch of salt, there's a fair amount of truth to it. It's also an incredibly rich country, and Tokyo is undoubtedly the most expensive city in the world to visit.

But another, perhaps less well-publicised fact about the Japanese is that they're video-game mad! Whereas your average game player in this country is almost ashamed to admit that he's a regular visitor to an amusement arcade, in Tokyo coin-op arcades are perfectly respectable places where everybody from schoolboys to lawyers go to partake of the blasting arts. The arcades themselves are far more comfortable and well-maintained than their British equivalents, with seating in front of all of the cabinets. You can even buy soundtracks of your favourite video games on CD in the bigger record shops!

And perhaps it's this far less inhibited attitude to arcade blasting that has led to the popularity of the games console, as opposed to the home computer in Japan. My theory is that Brit-

ish parents (who tend to do the lion's share of stumping-up when it comes to high-tech entertainment) tend to buy their offspring home computers as opposed to consoles because they fondly imagine that by buying their children computers they'll be contributing to their education whereas a games console is just an expensive toy. The fact that, with some honorable exceptions — the home computers they are exclusively used for playing games do seem to register for some reason. Whereas in Japan everybody has a home with the latest computers in their

everyday lives anyway so they don't have any hang-ups about using high-tech equipment to provide them with their spare-time thrills.

So just what is on offer to Japanese console owners? Well, up until a couple of months back, the answer would have been straightforward enough. Three 8-bit game systems dominated the market: Nintendo's Famicom, the Sega System and the PC Engine.

The competition in the large computer market, where the market is now being mainly filled by the game consoles, is Nintendo's Family

Computer System (Famicom for short) has sold something like 12 million units in Japan and there have been about 400 games produced for the system. Nintendo have been selling Famicom systems in Japan for some five years now, and about three years ago they also launched the system in the United States, and now have an impressive eleven million sales for their American system, the Nintendo Entertainment System.

This Christmas, they hoped to add Britain to their success stories. The major secret of their achievements is price-related: in Japan and America they sell their

machines for lower prices than any of their major competitors, thereby generating a large initial user base which in turn leads to a huge number of games being manufactured for Famicom/NES machines which attracts still more console buyers who are impressed by the numerical superiority of the Nintendo software base as well as the low price.

It's only however, in Europe, where market share and originality are the only large software base may be a surprise. In Japan, the market is dominated by Nintendo.

Mr Gushi Ichi... it a

major Japanese software manufacturer, says that while Nintendo's massive user base represents something like 90% of the market in theory, many of these machines are mouldering away in the back of Japanese cupboards.

"We can say this because we know the sales of our own software. We used to sell 600,000 units easily for the Nintendo, but nowadays 300,000 is about the maximum we can do, no matter how much we invest in advertising and promotion."

The problem, it seems, is a combination of the machine's own technical limitations and the huge amount of original, clone-type games which have been produced for it.

"Each new piece of software is fairly similar to some-thing that's gone before. And it seems to me that the engineers at all the software houses have mastered the capabilities of the Famicom's technology and are using the system's technology to its full extent, so that even if they come up with a better idea, they still can't express that idea with the Famicom. That's certainly been our own engineers' experience."

Even Nintendo themselves agree that their system, at least as far as the Japanese market is concerned, has run into problems of late. According to Howard Philips of Nintendo, "the software isn't as fresh and new as it could be, there's a lot of repetition and not a lot of new, original games. To some extent the engineers could be said to have exhausted the system."

As again it is, however Philips points to the huge growth in popularity of role playing games in Japan as exemplified by the unprecedented success of the Dragon Quest series. This role playing monolith is

60 Ram on the PC Engine

remains excellent on the PC Engine

Gravitar (Atari)

Dragon Spirit on the PC Engine

its third incarnation sold a whopping 3 million copies.

But as Hudsonsoft's Mr Gushi points out, "this is unusual. It's a phenomenon." He reckons that in terms of regular users, Nintendo's market share may have fallen by as much as half.

So what does the Hudsonsoft spokesman think is taking up the slack? The answer according to Gushi, is the PC Engine. Then again he would do one little-known fact about Hudsonsoft: that as well as writing software for a range of machines, their software engineers were actually responsible for developing the LSI chip which powers NEC's sophisticated games machine. Apparently this unusual situation came about because NEC approached Hudsonsoft to discover what kind of machine they should produce which would be the best from a game engineer's point of view, and Hudsonsoft themselves decided to produce one for NEC: the LSI chip.

Most people who've seen games like *R-Type* on the PC Engine will be surprised to learn that the LSI chips are in fact just 8-bit TMS or adaptive graphics and gameplay are a testament to the skills of Hudsonsoft.

There are just about a million units of this impressive arcade software available but Hudsonsoft's future is now. We're now

# ARCADES

# PLAYED IN JAPAN

## PART 2

selling about 300,000 units of good software for the PC Engine," he says, adding that his feeling is that many former Nintendo owners will have already made or are now contemplating making the move up to PC Engine.

Are there any drawbacks with this wondermachine? Well, for one thing there's the price. It's a lot more expensive than either the Famicom or the Sega in Japan. There's also the fact that though the quality of the games that already exist like *R-Type (I & II)* and Namco's brilliant PC Engine Tennis is incredibly high, the numbers of games currently on release is a mere 16 at the time of writing, though that figure is obviously growing monthly. More seriously from a British point of view, however, Nintendo haven't made any announcements regarding possible release dates in this country. And if indeed they do have any plans to bring the machine over here in the near future, they're keeping quiet about it.

The third point in the gaming tangle is Sega's console. With a roughly similar spec to the Famicom, a slight higher price tag, a fraction of the user base (an estimated 5% of the total) and far less software available, their appeal would initially seem slimmer both for seekers of quantity. Nintendo definitely wins by a mile in quality (PC Engine ditto). However, Sega do have a couple of major players which keep them in contention. For one thing, whilst

they do, of course, have exclusive access to the wares of their parent company Sega, which, when you consider their dominance in the arcades with the likes of *Out Run*, *Thunder Blade*, *Afterburner* and *Power Drift*, is a fairly major advantage, basically, if you want to play any of Sega's products at home at console-standard, you'll have to get the Sega system.

And secondly, at least as far as British gamers are concerned, they've initially succeeded in getting into the game ahead of the rest in this country. They've been on sale in British stores for

over a year with their distribution, promotions and licensing handled through the Virgin/Mastertronic organisation.

But even as Sega and Nintendo bring their 8-bit machines to our attention, they're already beavering away at 16-bit super machines which will almost certainly have the effect of making the present range of consoles — spanning new innovations that they may be in our eyes — decidedly old hat.

Sega have already launched their 16-bit Super system in Japan, showcasing arcade-level versions of the likes of *Altered Beast* and *Thunder Blade*. And, according to a recent announcement from Nintendo's headquarters they have commenced work on a 16-bit SuperFamicom.

Sega's 16-bit machine looks like the one that we might see over here first, as (a) it's complete and on sale in Japan now, and (b) Sega are already well-established in this country with their 8-bit system.

Nevertheless, Sega aren't prepared to put any date on the British release of their 16-bit baby: no decision has been made as to

Nemesis clocks in on the X68000

# PLAYED IN JAPAN PART 2

whether or when we might release the machine in Europe."

Nintendo are taking things far far slower. Although they have definitely committed themselves to producing a 16-bit machine, it isn't likely to appear for quite some time, and we'll be lucky if we see it in the next three years. But according to Nintendo spokesman Howard Phillips "the new 16-bit machine will be compatible with the existing 8-bit Nintendo software."

This may well be a canny move. Nintendo's approach to date has been to produce cheaper machines than the competition, thus generating a wider user base and software base. Having your new machine able to run hundreds of already existing games will be a big attraction to the customer weighing up with which machine to go for in the 16-bit stakes.

NEC have, according to Hudsonsoft's Mr. Gustie, implemented parts to incorporate a 16-bit PC engine (apart from anything else these 8-bit versions already arguably able to deliver top-standard graphics anyway), but they have just launched an extraordinary add-on to the basic machine which will they say open up a world of extra possibilities.

And NEC's use of new technology may indeed prove a far more marketable approach in these parts than bringing out a 16-bit PC Engine would, assuming first of all that they manage to get the 8-bit version into the

market, with extraordinary results in the graphics and sound departments.

"Right now most of the games machines have a memory of around 2 Mega-bytes. CD-ROM can hold something like 548 Mega-Bytes, about 250 times the memory capacity of other machines! This means you can for instance have CD quality orchestral soundtracks for the games."

Hudsonsoft have already started developing games like *Street Fighter* for the CD-ROM attachment. The huge attraction that the CD-ROM add-on might have in this country is that you can also use it as an ordinary CD player and link it into your stereo, thereby enabling games-loving music lovers to upgrade two parts of the entertainment systems

simultaneously. (In Japan where a whopping 83% of the population already own CDs, this isn't quite such a major selling point).

Apart from all these developments and promised developments from Tokyo, there are also a couple of other, local entrants in the great console handicap. Atari have recently announced that they hope to launch a very competitively priced console, the ST Plus, next Spring, a sixteen-bit console largely based on the ST home computer. Joystick manufacturers Konix are also likely to be bringing out fairly impressive looking three-piece games system which will include sit-down steering-wheel controls for driving games.

There seems to be no doubt that the game console is about to make a big impact here over the next 12 to 18 months. But before you all throw away your keyboards and saddle up for the console age, you may be interested to hear that in Tokyo the hippest young game players are actually selling their consoles and saving up to buy a home computer instead, the extraordinary Sharp X68000 which promises incredible sound and graphics as well as all the attributes of a seriously powerful computer. Only trouble is the X68000 currently retails in Japan for a cool ¥1,500,000.

shops. NEC's big new innovation is the CD-ROM add-on, previewed in the recent Tokyo Electronics Exhibition. This device takes the form of a CD player which can interface with the PC Engine — as well as hooking into an ordinary hi-fi system. This allows a huge amount of extra memory to

*Salamander follows up X68000 style*

*More Salamander*

# PIXELLATED

*Brain-sssaulting, synapse withering, abstract-shaped and convoluted.*

What is the closest musical equivalent of a video game? Well you couldn't get much closer than Humanoid's *Stakker Humanoid* which directly samples the sound from the old arcade luv *Gorf*. If you haven't heard the tune — and it's pretty hard to avoid — it's a mighty blast of computerised rhythm which makes most acid house look about as caustic as a quartet of pear drops. The man responsible is Brian Dougan, a

---

**The sound of a forgotten coin-op can provide the perfect inspiration for the kaleidescopic world of discovation and video. Mark Heley found out how . . .**

---

23-year-old music programmer from Manchester. I found myself in an arcade

playing the old machines for 5p a go, when I stumbled on it and was completely blown away

Back when good arcade games were scarcely seen and not heard *Gorf* was about the first game to incorporate a voice chip, which it used to disconcert many an unsuspecting gamer as if belittled things like 'Puny Earthling!' if you so much as passed it.

I just put two and two together and realised that a lot of people who are into arcade games are into dance music too.

### Like playing Afterburner?

The result was a collision which was truly half-and-half and which started life as the theme tune to BBC 2's 'Behind The Beat' and has now just completed a month in the top thirty. Three months ago Brian was completely unknown. Now, I wake up in my London squat and think, 'Gosh! I'm a popstar, with a hit single and an impending album on Westside records to his name. But it Brian is Humanoid, who is this Stakker?

'Stakker Humanoid' in fact was originally conceived as a combined audio/visual project, the song just being the musical half to a video made by the video production company of Stakker — who are coincidentally two friends of Brian's from Manchester: Colin Scott and Mark McClean.

Stakker visuals are a full-frontal assault on the brain. After a while, the effect on your withered synapses is much the same as staring into a strobe light (or playing *Afterburner* for a couple of hours).

Perfect pop arcade n video mix

What we do is not strictly computer animation as such. Colin explains: it's a computer modulation of digital video signals. We start off using the Fairlight's graphics package for things like colourisation, but then we go down to Medialab and use their Quantal Mirage and Endore to shape the raw material.

Their first break was getting two half-hour slots on MTV Europe. More Blitzkrieg than programme, it was a simple but utterly hypnotic demonstration of their art which stood out from the other bland videos like Oliver Reed at a temperance meeting. From that came the Humanoid collaboration and the visuals for the excellent compilation of Rhythmic King artists, Baby Ford and Bomb The

Bass, called *The Evil Acid Baron Show* (we didn't choose the title, they cried plaintively) but their newest production from which these glorious screen shots are taken is 'EuroTechno a serious state-of-the-art multi-media meltdown which once more whishes Brian Dougan's musical ability. Stakker are the shape of your television's future with programmes that make Max Headroom look like Kenneth Kendall. Live performances using a massive video wall are planned and they are also talking about producing an interactive Laserdisc game based on New York's Cyberpunk scene itself inspired by William Gibson's future shock classic *Neuromancer* which itself recently appeared through CA

### STAKKER COMPO

CHANNEL

We have no less than ten copies of Stakker's superb 'Evil Acid Baron Show' from Channel 5 video to give away. Forty minutes of sound and pictures, it features the music of Royal House, S-Express, Baby Ford and loads more. In addition to this, and thanks to the equally generous Westside records, we have a copy of the new Humanoid LP for each of our competition winners. It could be winging its way to you even before it has touched down in the Rashest record emporium.

All you have to do is answer this awesomely simple question: Which of Channel 5's releases are FAB?

Answers on a bandana to Stakker Competition, Commodore User, Priority Court, 30-32 Farringdon Lane, London EC1R 3AU.

## TAIYO

3 x 16in

A year after *Operate* in Wolf's first appearance in the arcades, and with Ocean's excellent conversion currently flying off the shelves, the time is ripe for a follow-up. And happily for all the *Un-Blad* fans out there, that's exactly what Taito have been thinking to themselves to do here.

You won't have much trouble working out the difference between *Operate* and *Thunder Zone* as the former's 11st-generation sets, is less than half the size of the latter's, and the player's ship (a new buy, and therefore features not in the original) is smaller in size. The cabinet itself is also a lot larger than the original.

Pump in your lens and the new scenario unfolds: hostages need to

Stated by P-16s

Where's the airsick tablets?

Terrorists hold a girl hostage

be rescued and not leave you disgraced.

The two major gameplay differences—bulldozer-gunner apart—is that where the original was merely a 2D vertically scrolling blaster, the update now actually has a straight-ahead 3D world, up to enemy swamps (read in some kind of weirdo).

The new character, a young girl, is a bit more of a character and a few more features. The new enemy is a bit more of a character and a few more features. The new enemy is a bit more of a character and a few more features.

And the new enemy is a bit more of a character and a few more features. The new enemy is a bit more of a character and a few more features. The new enemy is a bit more of a character and a few more features. The new enemy is a bit more of a character and a few more features.

## MINAMI SPECIAL

There's a bomb hidden in your car and if you don't make it, the end men I've been alerted. That's the rather garbled message offered to you at the beginning of this racing game. Why is not clear. Just put your foot on the accelerator and get the hell out of there.

Konami's contribution to pursuit games begins with your car tearing out of a factory moments before a huge explosion. You may have sabotaged it, or you may have been careless with a rag butt, either way the clock starts ticking immediately and you better get a move on to the first checkpoint. Cross that and the counter is reset. Fail and the car is destroyed.

It's difficult to know what you're supposed to be driving but it looks a

Bullet holes splatter the windscreen

# HOT CHASE

little like an Aston Martin DB5 or a Bondmobile. There again having driven it, it handles more like a Datsun Violet.

Your route to safety is naturally, not clear, nor is the checkpoint so near so Spar. In fact it's miles away, and you'll have to weave through narrow, windy roads and busy streets. You're not too popular either and people are out to stop you. Soldiers spray bullets at you, and helicopters appear randomly strafing the road ahead. The nice touch about *Hot Chase* here is that if you're hit, bullet holes pock-mark the screen.

Your way is frequently blocked too, by obstacles. Oil drums fall from the back of a speeding lorry, a train cuts you off, and the only way to continue is by shooting up the ramp and over the top. There's rocks too, some of the smaller ones of which can be used, *Buggy Boy* style, to jump the larger ones. Don't worry

about barriers and fences — you can just burst right through them.

The idea for *Hot Chase* is good. The development of race game into pursuit game with a shoot 'em up angle is tested, and proved quite

successful recently for *Silto* with *Chase HQ*. Konami's attempt leaves something to be desired — mostly in the area of gameplay. They haven't got the race part right. The car has no 'feel', the steering wheel is totally

devoid of any weight, so how much you have to turn it to affect the direction of the car is unclear. It's just too stoppy. The same goes for acceleration. There's no real idea of speed involved. You'll just find it impossible to stay on the road if you go too fast.

Graphics and sound on *Hot Chase* are little more than average. But it's the game's toughness and lack of playability that is the turn off. *Hot Chase* gets cold very quickly.

# ARCADE

Going somewhere, pal?

**Q** uite whose revenge this sequel to Double Dragon is, I'm not sure. In the original, fans of this classic two-player beat 'em up will remember, you pursue a gang of thugs who have kidnaped

your girlfriend and whussed her away to the hideout of the Shadow Boss.

The scenario is little changed this time, except the deed which sets you after your gangs is the murder

of your girlfriend, gunned down in cold blood by a hoodlum with a machine gun. Is that their revenge on you for destroying the Shadow gang in Part I, or the act which spurs you on? Either way, it's action time!

# D THE REVENGE DOUBLE

# ADES

GRAPHICS: 8

PLAYABILITY: 8  
CONVERTABILITY: 8  
OVERALL: 7

Find a crate and lob it!

Get 'em or they'll get your girl!

Pull my hair and I'll scratch out your eyes

Wallop, wallop, down in one!

Battle your way through independently scrolling sections of the screen against three or four gang members, until you get a thumbs up — after wiping them out — to progress on to the next level. Gang members come in all shapes and sizes ranging from thugs your size to towering beasts dressed in bondage gear, or huge fannies. Dwell in the same place too long and one will use your face for a doormat. My

levou! He is one of the bigger geezers who picks you up by the hair and irons the creases out of your face.

Naturally you're not helpless and you get to dish out a fair bit of stick yourself, including a bit of hair pulling of your own. The move where you grab them by the hair and knee them persistently in the ear. Just as before there's knives, chains and boxes left around the

various levels for you to pick up and turn on your assailants.

Even the many levels bear an uncanny resemblance to the predecessor, with factories, full of conveyor belts and packing cases lifts and struts. And by now you'll have come to realize DD II's central fault: It simply isn't different enough from its predecessor. The gameplay is classic and I can forgive them for not missing with a good formula

there, but it would have made the game much fresher to have transported it to a different place,

with new backdrops and characters.

DD II could have been as good as it ever was — and it still is head and shoulders above most beat 'em ups, being both tough and addictive, but it somehow disappoints too. Still ripe for someone to have another go at the conversion.

## COMPO RESULTS

### POWERPLAY COMPO

When we give away prizes, we give away real prizes. Just take a look at this. Not only were there 20 Powerplay Cruiser joysticks, there was an Amiga to plug it into. If you remember, you had to list the seven points in order of importance. The answer was, after much agonising by the judges, F C D E A G B. B being 'Colour matches your wallpaper'. Shame on you if you put B first — we're wacky, but not that wacky.

The lucky winner of the Amiga A500 is Daniel Duffin, Notts.

Ten more who win themselves a clear autoFire Cruiser are: A. Rogers, Maldstone; M. Darr, Herne Bay; Mihan Fuard, Watford; Mark Sim, Moray; Daniel Beasar, Milton Keynes; P. Draycott, Herne Bay; Anthony Baldwin, Eayleigh; Onwal Teang, Hortholl; Robert Carlton, Cambridge; Steven Irving, Middlebrough.

The next ten, win themselves either a black or blue

cruiser: Ian Dale, Leek; Paul Sidhu, Leeds; Paul Hencox, Birmingham; Francis Dallas, Lanco; T. Jenkins, Glos.; Scott Thompson, North Berelck; Sam Jenkins, Wolverhampton; Anthony, AntNony Marland, Lanco; Edward James, Birmingham; Alan Elston, Derbyshire. A pat on the back to all.

### CHEWITS COMPO

You lucky people! To prove

### TIN TIN COMPO

Do you know your Professor Calculus from Skut when it comes to Tin Tin? It seems that some of you do, in fact we were flooded with entries telling us that the names of the bubbling detectives in Tin Tin are Thompson and Thompson. Which was wrong. They are in fact Thompson and Thomson (aka The Thompson Twins). Among the multitude that got it right, the five lucky winners are: Mark Pace, Dartford; Peter Wognum, Essex; Paul McHale, Cheltenham; Mark Beardall, Hottingham; Laurence Hallam, Chorleywood

### BOMB THE BASS COMPO

Plenty of keen entrants for this one too, and picking out just five winners for this was a little difficult. The question we asked was who did the original version of 'Say A Little Prayer'? The answer, of course, was Dionne Warwick, though Aretha Franklin's cover version is widely accepted as the definitive version. That said, the lucky five who walk off with Bomb the Bass's scummy album 'Enter the Dragon' are: Matthew Beech, Stoke-On-Trent; R. Ramaden, Bradford; Matti Kennedy, Cornwall; Aymed Mousaad, DuWhich; Richard Walker, Dudley.

## SCREEN SCENE

Despite the post Christmas blow out there's some quality software on the way in February/March, including the revamped version of *Katakis*, now named *Denarius*, which we'll have on the 64 and the Amiga. A class blast is guaranteed. We'll have *Cosmic Pirate* from Palace, and a player's guide to *SEUCK* on the Amiga. Look out too for Amiga *Flying Shark*, *Dynamic Duo* and *Tyger*, *Tyger* on the 64.

See y'all on Feb 26th. Oh, and have a nice issue.

Katakis, whoops... Denarius on the 64

155400 AREA: 04 2 UP 000000

SEUCK -- A user's guide

## THE AMERICAN DREAM

Recent releases from US software houses like Cinemaware and Spectrum Holobyte have thrust 16 bit gaming to the fore in everyone's minds. Games like *Falcon* and *TV Sports Football* genuinely deserve the much over-used phrase, 'state-of-the-art'. Next issue we'll be carrying a report from the CES Show recently held in Las Vegas. The future could be here sooner than you think...

Look out too for the results of our Reader's Poll. They've been flooding in since we printed the form, and if you still haven't voted hurry np, the closure date is 31st Jan.

# Tommy's TIPS

## Mega problem

● I am the proud owner of an Amiga 1000, but I am getting increasingly frustrated by the fact that more and more programs, particularly graphics programs, will not run properly unless you have at least 1 Mbyte of memory. The price of the 0.5 Mbyte RAM board for the A500 is not too expensive, but of course won't fit the A1000. All the RAM boards for the A1000 seem to cost a fortune and it all seems rather unfair, particularly as I paid more for my A1000 in the first place!

J Turnbull,  
Swindon

*One of the problems with machines like the Amiga is that the original concept of 256 kbytes, which the original machines were equipped with has proved to be totally inadequate. Commodore realised this and when the A500 was announced it already had 500 kbytes, with a relatively inexpensive upgrade to 1 Mbyte.*

*However, all is not lost for the A1000 owners as SPIRIT TECHNOLOGY has produced their 'Inboard' series of upgrades for both the A500 AND the A1000, at the same prices!! I believe the prices start at £139 for a populated 0.5 Mbyte card with battery-backed clock, up to £389 for a 1.5 Mbyte card with clock. While that may be more than the Commodore 0.5 upgrade for the A500, this one allows you to add memory at a later stage by just adding chips to the board, plus being the best value I've seen for the*

*A1000. Best of all, it fits INSIDE both machines making it also completely unobtrusive (to say nothing of the shock your friends will get when they see an apparently unexpanded A1000 running some of those expanded graphics displays!). The boards are available in this country from BYTES & PIECES or through ICPUG.*

## Business letter

● I own a Commodore 64 and wonder if you can assist me with the following:

1. I wish to buy a printer for my business, can you suggest a suitable printer for producing near letter quality text at an affordable price?
2. Can you tell me anything about the Commodore PC10 (other PC compatibility etc)?
3. I want to write programs in machine language but I don't know much about it, can you tell me the name of a good book for a beginner. Also the name and suppliers of an assembler program.

I would appreciate any help you can give me.  
Sean Cooke,  
Kenmare,  
County Kerry, Ireland

*There are a number of new printers coming on the market all the time, each claiming to offer more features for your money. As you will have gathered over the past few months, I am a great fan of STAR printers, although with the new EEC levy price rises, they are not quite such good value as they once were. However, I still rate the LC-10 as a good, relatively inexpensive printer (£250) with a lot of features for the money and a good*

*NLQ quality of print. If you need something faster, or with really good NLQ then the STAR LC24-10 has to be one of the best value 24-pin printers on the market. One of the advantages of the LC-10 is that you can get it with a CBM interface included for the same price as the Centronics version.*

*As for the PC10, it has been rather overhauled by the more recent models and the new pricing structure, but is quite a competent PC-clone. It is no better or worse than many of the other clones and usually, software compatibility is much less of a problem these days than it used to be (at least for MS-DOS versions 3.XX). The PC10's main problem is its cost compared to many of the clones that come complete with a 20 Mbyte hard-disk. With only floppy drives, a PC's use is somewhat limited and most users who do not have access to a network, with its remote hard-disks, rapidly find the floppy based machines inadequate for today's software. You will pay around £575-£600 for a single drive model PC10 and up to £750 for a dual drive system. With some AT-clones getting down almost to the £1000 mark, complete with 20 Mbyte disks, the PC10 pricing is a little out-dated.*

*With regard to machine language programming, I assume you are talking about the 64 rather than the PC10, in which case there are some very good products around. I doubt if any one book will give you everything you need, but two I would recommend are: Mastering Machine Code on your Commodore 64, by Mark Greenshields (Interface Publications £7.95) and*

*Programming the Commodore 64 by Rae West (Level Ltd around £9.50).*

*The most suitable assembler is also one of the most expensive: SuperSoft's Mikro assembler at £57. Being a cartridge means you don't have to reload every time you crash the system, as you will undoubtedly do many times while you are learning. There are cheaper ones on the market, but as with most things the cheaper ones often lack some of the facilities which make a beginner's life that much easier.*

## Keyboards

- I have several queries:
- 1) Can replacement keyboards be bought for my C64. Preferably of BBC, Spectrum +3 or CBM 128D quality, if so how much?
  - 2) How about a printer? I am looking for something of quite good print quality (suitable for amateur mag or fanzine) and in the £100-£150 bracket.
  - 3) Where can I obtain some newspaper mag producing software something in the Fleet Street Editor vein?
  - 4) Can the LOGO4 programming language be bought for the 64?
  - 5) How could I go about transferring pictures from paper such as comics on to my computer screen and what if any equipment would be needed.
- Matthew Hallier,  
Chard,  
Somerset.

*I am not aware of any keyboards for the 64, and I would be surprised if anyone does a replacement since there is not much wrong with the existing one. Unlike computers like the original Spectrum for which there was a great demand for a decent keyboard, the 64's keyboard was really quite advanced for a home machine at the price.*

*I am also afraid there is very little in the way of printers for the 64 at much under £220 which will produce anything like decent quality. Even if you picked up one of the very cheap (and VERY slow) daisy-wheel printers you would still need a CBM-centronics interface*

Tommy attempts maintenance on an old Commodore supercomputer.

in order to connect it to the 64. However, if you also want to print graphics, on your third and last question indicates, then even a cheap daisywheel would be no good. This means you are talking about a dot-matrix printer, and the cheapest one I know is the Citizen 120D at around £140. The quality of this is unlikely to be adequate on text though, so you might need to move up to something like the STAR LC-10 (with a CBM interface) which costs around £240.

Desk Top Publishing programs for the 64 are not going to be in the same league as machines with an 80-column screen, but there is *Geopublish* at £35-£49 or *The Newsroom* also around £30; you can also obtain *Clip Arts* disks for the latter. Finally there is *Stop Press* at around £80 which includes a mouse. To transfer pictures into your computer requires a scanner. There are some very small and (relatively) inexpensive ones on the market now, but I can't recall ever seeing one that works with the 64. However, there are some video capture systems on the market, but they are expensive (especially if you have to buy a video camera) and you may have problems using the resultant pictures in your document.

The only other way is to redraw the cartoons using a graphics tablet, but this is rather hard work unless you are already pretty artistic.

You may have to cheat and use the clip art pictures, even though this isn't quite as satisfying.

Finally, *LOGO* is available for the 64 (I don't know what the difference is between *LOGO* and *LOGO4*), although you might have difficulty finding a dealer with a copy; I haven't seen it advertised much recently.

### Which computer

I cannot decide whether to purchase an Atari ST or an Amiga 500. Many of my friends have STs but none have the Amiga so this would probably influence my choice. So could you please tell me which is the best to buy and why if you could? I would also like a printer and wordprocessor package to go with the machine you suggest.

Steven Gregory,  
Lowton,  
Nr Warrington

If you look at both the Amiga and the ST they have their strengths and weaknesses. What you must do is decide what you intend using the computer for, how much you have to spend, and whether you will want to expand it. At the risk of drawing the wrath of any ST owners I have to say that of the two, the Amiga is potentially the better and more versatile machine. Note that I say potentially because to really take advantage of

everything the Amiga has to offer would cost an arm and a leg in hobby-computing terms.

If you are contemplating using the computer to control midi systems as the prime purpose, for example, then the ST comes complete with built-in midi ports and a lot of software designed for just this purpose. While the Amiga has a growing range of software, and midi adapters are available, it is still not such good value if that is its prime purpose. On the other hand, even with the optional blitter chip, the ST doesn't match the Amiga for its flexibility and speed when displaying moving colour graphics. This increases the Amiga's gaming potential. Since you already know people with an ST, go and ask to have a look at one and see how well it does the sort of thing you want. Then do the same with an Amiga, either at a dealer or a show.

As for printers, then if you can afford it I would recommend one of the excellent colour printers on the market now, the STAR LC-10C being a very good choice. Colour printers will really let you exploit the graphics capability of either the ST or the Amiga, but also allow good quality of text for things like word-processing. Actually choosing a wordprocessor program can again be a minefield where personal preference is concerned and I have also not looked in detail at any ST

packages. I am a great fan of *Flexwrite*, it's one of the easiest word processors to use combined with good flexibility, but it also has a few quirks which are guaranteed to infuriate people who are used to packages on the IBM range of computers. If you are looking for something inexpensive then *Scrubble!* on the Amiga may be suitable. However, new ones such as *ProWrite* are appearing, all equally impressive. The thing to note is that some WP programs are *What You See is What You Get* (WYSIWYG), with the possible exception of displaying certain font styles on the screen. Others are *Post-formatted* (or *Format on Printing*) which means that you don't see what the final result will look like until it prints out, but they often offer more options than the former type.

I prefer the WYSIWYG approach personally and if you are doing just letter type documents then this is often the easiest and quickest method. Work out what features you need, check which ones have all those features, then buy the cheapest one.

With prices ranging from £49 to over £220, don't be swayed by bells and whistles you will never use.

Send your queries to Tommy at  
GU, Pilony Court,  
30-32 Farm Video Lane,  
London EC1R 3AU

'Twas the season of good cheer! But now it's back to a humdrum existence soaking up the back page of CU for TLW. It's a time when resolutions are more easily made than broken (as someone once said) and the Ed proved it true. Despite Nick Kelly not being here, and the fact that he'd resolved to be nice to everyone this year, he'd showed up at TLW within moments of coming into the office and reduced us completely to tears. And all we'd done was drink his Christmas ale . . .

● Didn't we tell you Nick Kelly was leaving? Sorry, we didn't think it was important. The roving Irish troubadour has gone full time with his showband The Fat Lady Sings. Anyone with bookings for wedding receptions, christenings and parties should contact him care of CU.

● The Garage holes left by the behemoths of O'Kelly and Steve Jarrett have however been filled. So it's a warm gameshow welcome to new Staff Writer Mark Heley, another journalist with a musical leaning. Mark writes for Blues and Soul and doubles as a DJ spinning Freestyle, Hip Hop and House at poshy clubs. The Dep Ed's post is taken by Steve James the everwile editor of Bicycle magazine (and no he can't get you a bike or some cycling shorts). Steve 'Bud' James is also known for being a bit of a hot sax player, thus continuing CU's mandate for musical taste. This however doesn't apply to the ad dept.

● Christmas naturally disappeared in a haze of overdrinking and overswinging, nowhere more so than at the InDin. This is the software industry's regular noah up and awards night, attended by anyone who's important or thinks they're important and ought to stump up

New additions: Left, Steve James the deputy editor and Mark Heley, staff writer. Poor suckers!

Mark Strachan reveals what a cheeky chappie he is. Don't turn round Mark!!!

the money to prove it. Microsoft, Ocean and Rambard scooped the majority of the awards — much to System 3's disgust. The evening soon descended into revelry. There was a spot of fund raising which resulted in some amusing and embarrassing camera front from the software supremos.

Gerry Howells, head of SSI at US Gold did a very creditable Tom Jones routine. It was so realistic in fact (jacket throwing, pelvic thrusts) that several women had to be dragged off him by the end. Ocean boss David Ward was then called on to perform his celebrated Mick Jagger impression. A host of slyness overlooked the great man and his impression shrilled to a quick bout of microphone swinging and an embarrassed shuffle — probably more like Mick looked in court on a drugs bust. Perhaps he does it better in the bathroom (yul, yul).

The highlight was to come though when Doerak's Mark Strachan was offered a large sum of money to reveal what was under the kilt he breaks out once a year. It was quite a lot of money Mark, so we thought it only fair the results were made public.

● Anyone notice an embarrassing similarity between a front cover of CU and recent events? December's cover carried an illustration of an F-14 Tomcat from the JFK carrier shooting down a Mig 23. Ouch! CU has no clout with the Pentagon whatsoever.

● Meanwhile System 3 have scored a notable victory over con-op company Data East. The litigious Japanese had one put over on them by crazy Cale after they slapped an injunction on International Karate, claiming he'd ripped off Karate Champ. It's a major coup and it could have enormous implications for the industry as a whole . . .
